

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ALPHABETICAL INDEX to REPORT and TABLES	241-254

REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March, 1884.
(1882.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the marriages, births, and deaths that were registered in England and Wales during the year 1882, together with a report on the main features of the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were 889,014 and 516,654 respectively, so that the natural increment of the population, or excess of births over deaths, was 372,360, or 1·43 per cent. of the estimated population in the middle of the immediately preceding year. In 1881 the natural increment had been considerably higher, amounting to no less than 391,707. The falling off in 1882 was not due to any diminution in the number of births, which were 5372 more than in the previous year, but to an increase in the number of deaths, which, although still much below the average of recent years, was considerably in excess of the number registered in 1881, when the death-rate reached the minimum as yet recorded.

Were the growth of the population since the last Census determined simply by the balance between registered births and deaths, the population of England and Wales in the middle of 1882 would have numbered 26,464,820 persons. But such a method of reckoning leaves out of account the effects of emigration and of immigration, which cannot be measured with any great precision. It would appear, however, from the returns made by the Board of Trade that the loss due to the excess of emigration over immigration since the date of the Census must have been considerable. For both in 1881 and in 1882 the excess of emigrants from the United Kingdom over immigrants into it was of unprecedented magnitude. The excess in 1881, according to the Board of Trade returns, amounted to 315,409, and in 1882 to 335,020 persons, whereas the average annual excess in the five preceding years has been only 115,934. How much of these losses fell respectively to England and Wales, to Scotland, and to Ireland, we have no means of stating with any precision; but that pretty nearly a full share in the increased losses in 1881 and 1882 fell to the population of England and Wales may be inferred with much probability from the fact that of those emigrants who were natives of the United Kingdom 58 per cent. in each of the two years were of English or Welsh origin, the mean proportion in the five preceding years having been 60 per cent., or only slightly higher.

The population, as enumerated in April 1881, numbered 25,974,439 persons; and, on the hypothesis that the rate of increase continued to be the same as it had been in the interval between that date and the previous Census, the population in the middle of 1882 was 26,413,861. Of these 12,853,737 were males and 13,560,124 were females. This is the population on which the rates in this report have been calculated.

MARRIAGES.

The marriages in 1882 numbered 204,405, giving a rate of 15·5 persons married to 1000 persons living. The marriage-rate was at its maximum in 1873, and fell year after year continuously from that date till 1879, when it was at its minimum, viz. 14·4. In 1880 it began to recover from the long depression, and was 14·9; in 1881, it advanced to 15·1, and finally in 1882, a still further rise brought it, as already stated, to 15·5.

Coincidentally with the rise in the marriage-rate, there was in 1882, as almost invariably is the case, an increase in the value of exports from the United Kingdom per head of the total population; there was also, as is not quite so invariably though still most commonly the case, a rise in the value of imports per head of population; and finally there was what, as was shown in my last Annual Report, is not usually a concomitant of a rise in the marriage-rate, a very slight fall in the average Gazette price of British wheat. The fluctuations in these several measures of well-being are shown in the following table. A column has also been added to the Table, giving the fluctuations in another measure of commercial activity, viz., the amount cleared each year at the London Bankers' Clearing House, per head of population. It will be seen that here also there is a very close agreement with the fluctuations in the marriage-rate; in each case the maximum was reached in 1873, and the minimum since that date in 1879.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS AND IMPORTS, PRICE OF WHEAT, and amount cleared at the Bankers' Clearing House, in each of the 28 Years 1860–82.*

1882	15·5	6 16 10	11 14 0	20 7 8	45 0	236

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are also derived from the Board of Trade Statistical Abstracts, calculated upon the population of England and Wales.

If the marriage-rates of 1882 are compared with those of 1879, the year of greatest depression, (*see* Table 9), it will be seen that the only counties that apparently did not share in the recovery were Kent (extra-metropolitan), Sussex, Hampshire, Berkshire, Hertfordshire, Oxfordshire, Huntingdonshire, Cambridgeshire, Dorsetshire, Gloucestershire, Herefordshire, and Rutlandshire, together with North Wales, all of which are mainly agricultural. In each of these counties the rate in 1882 was lower, or at any rate not higher, than it had been in 1879. On the other hand the counties which showed the greatest recovery were Durham, Monmouthshire, Staffordshire, Cumberland, Cornwall, the North Riding of Yorkshire, and Nottinghamshire, all of which are mainly of mining or industrial character.

Forms of Marriage.—Of the 204,405 marriages celebrated in 1882, 146,102 or 71·5 per cent. were solemnised according to the rites of the Established Church, and 58,303 or 28·5 per cent. otherwise. The proportions were precisely the same in the immediately preceding year 1881; a fact which is worthy of notice, inasmuch as there had been no similar arrest since 1871 in the almost continuous decline in the proportion of church marriages to marriages of all kinds. The subjoined Table shows what proportion of the marriages in the Established Church were by license, banns, and Superintendent Registrar's Certificate respectively; and it will be noticed that the proportion of marriages by banns, which began to rise in the quinquennium ending with 1865, rose in 1882 to the highest point attained since that period.

TABLE B. — OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-82.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS OF MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.*

„ 1882 - -	100	·05	9·12	88·42	2·41

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 469 of the marriages in 1882 the particulars required for the accurate construction of the above Table were not furnished, owing to the negligence of the officiating clergymen. These cases of neglect were, however, fewer in number than in any previous year.

Of the 58,303 marriages, not according to the rites of the Establishment, 9,235 were solemnised in Roman Catholic places of worship; 70 were

marriages according to Quaker Rites ; 22,768 were solemnised in the chapels of other Christian communities ; 513 were marriages of Jews ; and 25,717 were civil marriages in the offices of Superintendent Registrars.

First Marriages ; Re-marriages. Males.—Of the 204,405 men who married in 1882, 178,849, or 87·5 per cent. were bachelors,* while 25,556, or 12·5 per cent., were widowers.

Of the 178,849 bachelors, 170,720, or 95·5 per cent., married spinsters, while 8129, or 4·5 per cent., married widows.

Of the 25,556 widowers who re-married, 15,616, or 61·1 per cent., married spinsters, while 9940, or 38·9 per cent., married widows.

Females.—Of the 204,405 women who married, 186,336, or 91·2 per cent., were spinsters,* while 18,069, or 8·8 per cent., were widows.

Of the 186,336 spinsters, 170,720, or 91·6 per cent., married bachelors, while 15,616, or 8·4 per cent., married widowers.

Of the 18,069 widows who re-married, 8129, or 45·0 per cent., married bachelors, while 9940, or 55·0 per cent., married widowers.

Divorce.—The number of persons married in the year, who were described as divorced, was 124, and consisted of 69 men and 55 women. Of the 69 men, 53 married spinsters, 14 married widows and 2 married divorced women ; while of the 55 women, 41 married bachelors, 12 married widowers, and 2 married divorced men.

Ages at Marriage.—In 30,236, or 14·8 per cent., of the marriages, the officiating minister or registrar neglected to insert the ages of both parties, or of one or the other of them, in the register. The mean age at marriage of the remaining 174,169 couples, whose ages were duly stated, was 27·9 for the males and 25·6 for the females. The mean age of the bachelors was 25·9 and of the spinsters was 24·4 years ; while the mean ages of the widowers and widows who re-married were respectively 43·3 and 39·8 years. How very slightly the mean ages vary in successive years is seen in the following Table.

TABLE C.—MEAN AGES AT MARRIAGE.

YEAR.	Bachelors.	Widowers.	Bachelors and Widowers.	Spinsters.	Widows.	Spinsters and Widows.
1867	25·8	—	28·0	24·5	—	25·8
1868	25·8	—	27·9	24·4	—	25·7
1869	25·8	—	28·0	24·4	—	25·7
1870	25·8	42·6	27·9	24·4	38·8	25·7
1871	25·8	43·6	27·9	24·4	39·0	25·7
1872	25·7	—	27·9	24·3	—	25·7
1873	25·6	—	27·8	24·2	—	25·6
1874	25·7	43·0	27·9	24·3	39·4	25·7
1875	25·7	43·0	27·9	24·3	39·4	25·8
1876	25·7	43·1	28·0	24·4	39·5	25·8
1877	25·7	43·0	27·9	24·4	39·6	25·8
1878	25·8	43·1	27·9	24·4	39·6	25·8
1879	25·8	43·2	27·9	24·3	39·8	25·6
1880	25·8	43·3	27·9	24·4	39·6	25·7
1881	25·9	43·4	28·0	24·4	39·8	25·7
1882	25·9	43·3	27·9	24·4	39·8	25·6

* The 69 divorced men who re-married in the year are here reckoned as bachelors and the 55 divorced women who re-married are reckoned as spinsters.

Of the women who marry rather more than half, and of the men who marry rather less than one-half, are from 20 to 25 years of age (See Tables on p. 26). The annual chances of marriage are, as might be supposed, much higher for women than for men in the earlier periods of life, and much higher for men than for women in the later periods. This is shown in the following Table, which gives the number of bachelors and spinsters who married annually out of 1000 living of corresponding ages. The figures are given both for 1870-71-72, and for 1880-81-82; and it will be seen that at both periods the annual chances of marriage are considerably higher for women up to the age of 25, but that after that age the chances are higher for men. It will also be noted that the decline in the marriage-rate in 1880-81-82 as compared with 1870-71-72 affected both bachelors and spinsters, and at each stage of life without exception.

TABLE D.—ANNUAL MARRIAGES of BACHELORS and of SPINSTERS per 1000 living at successive age-periods.

Age Periods.	1870-71-72.		1880-81-82.	
	Bachelors.	Spinsters.	Bachelors.	Spinsters.
15	4.7	22.5	4.6	21.8
20	123.5	137.9	106.8	121.7
25	120.4	88.6	112.4	80.4
35	43.6	31.3	40.5	26.3
45	15.5	12.3	14.3	10.4
55	3.3	3.7	3.0	1.6

Marriages of Minors.—The numbers of men and women under 21 years of age who married in 1882 were 15,459 and 45,019 respectively; so that of every 100 men who married 7.56, and of every 100 woman who married 22.02 were minors. The proportion of these premature marriages to all marriages was at its maximum in 1874, both for males and females; from that date the proportion declined continuously year by year till 1881 inclusively, but in 1882 the continuity of the decline was broken and the proportion rose in both sexes. This change would seem to indicate that the increase that occurred in the marriage-rate was greater among the improvident, than in the provident classes.

Signature in Marriage Register.—The proportion of persons who at the time of marriage were unable to sign their names in the register was 15.2 per cent. in 1882, and was smaller than in any previous year. It is, however, to be noted that the progress in this respect has not been so rapid in the last few years as in the immediately preceding periods. In the triennial period, 1874-76, the decline in the proportion of illiterates who married, compared with the preceding three years was 11.2 per cent.; in the succeeding triennium, 1877-79 the decline was 14.9 per cent.,

whereas in the next period, 1880-82, the fall was only 8·5 per cent., and on one occasion during that period, viz., in 1880, there was, as was pointed out in the report for that year, an actual retrogression, for the first time since 1850, and the proportion of illiterates slightly increased. The probable explanation of this apparent retardation in the efforts of education, is, as has been pointed out in previous reports, that in periods of industrial depression, such as the country has been passing through in recent years, the educated and the prudent classes abstain from marriage to a greater extent than do the improvident and the uneducated. At the same time, however, it must be borne in mind that there must eventually come a time when state education will have done all of which it is practically capable; and that, as this time approaches, there must necessarily be a falling off in the rate of progress.

Certified Places of Worship.—There were on 31st December 1882 22,070 places of worship (not belonging to the Established Church), certified under Acts 15 and 16 Vict. c. 36., and 18 and 19 Vict. c. 81. There were 769 new buildings registered during the year, whereas 65 buildings were removed from the register by cancellation; the net increase during the year was therefore 704.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1882, was 9005 (see Table 11), showing an increase of 178 during the year.

BIRTHS.

The births registered in 1882 numbered 889,014, and were in the proportion of 33·7 births per 1000 persons living. This was the lowest birth-rate recorded since 1853, when the rate was only 33·3. The rate was at its maximum point in 1876, when it was 36·4; but from that date fell uninterruptedly, in natural accordance with the fall in the marriage-rate.

The lowest birth-rates were in Huntingdonshire (27·6), Herefordshire (27·7), Rutlandshire (28·0), Cambridgeshire (28·5), Dorsetshire (29·1), North Wales (29·2), and Shropshire (29·3); while the highest were in Leicestershire (34·9), Monmouthshire (34·9), Essex (35·0), North Riding (35·1), Lancashire (36·0), Nottinghamshire (36·9), Staffordshire (37·6), and Durham (39·3). These differences, as has been pointed out in previous reports, are explicable in part by the greater proportion of married women of reproductive ages in the population of mining and manufacturing, as compared with agricultural districts, and in part by the comparative youthfulness of such excess of married women; but it would also appear that, when all allowance has been made for such differences, there is still an excess of fertility in the industrial as compared with the agricultural parts, which may possibly find its explanation in the greater physical vigour of the mining and industrial population, which is constantly being recruited by the immigration of the pick of the rural population.

Sex.—The male births numbered 452,752, and female births numbered 436,262, so that the former were to the latter in the proportion of 103·8 to 100; the mean proportion in the ten preceding years having been 103·9 to 100. (*See* Tables 13 and 16.)

Illegitimate births.—The illegitimate births numbered 43,155, and were in the proportion of 4·9 to every 100 births registered. The proportion had been precisely the same in 1881, but was higher than in any one of the six preceding years. This was not due to any increase in the illegitimate births, but to the diminution in the legitimate births caused by the large decline in the marriage-rate. The illegitimate births were in fact fewer in proportion to the population than in any previous year, being 1·6 to 1000 persons living, a proportion fractionally below that of the seven immediately preceding years, in each of which it was 1·7. (Table 13.)

The amount of illegitimacy, as measured by the proportion of illegitimate births to unmarried females of childbearing ages, differs very greatly in different counties. This question was discussed at some length in the Annual Report for 1879, and it was then pointed out that England and Wales could be divided, and not very roughly, into three zones, a southern zone with an illegitimacy rate below the general average, a midland zone with illegitimacy somewhat above the average, and a northern zone with an excessively high illegitimate rate. The experience of the three years that have elapsed since that report confirms the conclusions then arrived at, as will be seen by comparing the first column of figures in the following table with the corresponding county figures in the report for 1879 (42nd Annual Report, page xvii.). The order of the counties in the two tables is almost identical.

A very considerable proportion of the illegitimate births, namely 163 per 1000, occur in workhouses; whereas the proportion of legitimate births that occur in those institutions is no more than 2·1 per 1000. The extent, however, to which the workhouse is resorted to by unmarried women for their confinements varies very much in different counties, and it is curious to note that, as is shown in the second column of figures in the following table, the proportion of illegitimate births that occur in workhouses is on the whole, and speaking generally, highest in those counties in which the illegitimate birth-rate is lowest; and, vice versâ, is lowest where illegitimacy is most common. It may be suggested as a not improbable explanation of this inverse relation between the figures in the two columns one and two of the table, that the counties in which there is most illegitimacy are counties where there is much systematic domestic concubinage, in which the mother of the illegitimate children enjoys the state of mistress of the house, and remains there for her confinements; whereas the counties in which there is comparatively little illegitimacy are counties in which systematic concubinage is not common, such illegitimate births as occur being rather the results of stray licentiousness; in which case the mother has no house of which she is mistress, and is consequently forced in her need to take refuge in the workhouse.

TABLE E.—ANNUAL RATE OF ILLEGITIMATE BIRTHS per 1000 UNMARRIED WOMEN, aged 15–45 years, in the three years 1880–81–82; and the PROPORTION per 1000 of ILLEGITIMATE BIRTHS registered in WORKHOUSES in 1882.

DEATHS.

The deaths registered in 1882 numbered 516,654, and were in the proportion of 19·6 to 1000 persons living. In 1881 the proportion was 18·9, but with this single exception the death-rate in 1882 was the lowest as yet recorded. The annual death-rate in the decade 1871-80 was 21·39, and had the rate in 1882 remained at the same point there would have been 48,338 additional deaths in the course of the year. Some part, it is true, of this diminished mortality must be ascribed to the change in the age-distribution of the population, the proportion of aged persons, among whom the death-rate is always high, having diminished of late years. For this change, however, it is easy to make allowance, by calculating the number of deaths that would have occurred, had the conditions of health remained as in the previous decade, from the death-rates at each successive age-period, and not from the general death-rate. The general death-rate, then, in England and Wales, with the altered age-distribution, would have been 21·18, had the death ratio at each successive age-period remained as in 1871-80, and the total deaths would have been 559,532 instead of 516,654. Thus of the apparent saving of 48,338 lives only 42,878 lives were really saved, while the remaining decrease of 5460 deaths was only apparent, being in reality due to the altered age-distribution of the population.

Ages.—The fluctuations in the general death-rate, that is to say, in the proportion between deaths and population of all ages, affords a convenient measure of the varying health of a given community; but in any comparison between one community and another, or between one community and itself at any considerable interval of time, it is necessary to correct the general death-rate for differences in the sex and age distribution of the population; for it is self-evident that with equal degrees of healthiness a population that contains a larger proportion of very young children or of very aged persons will have a higher death-rate than a population in which the proportion of such persons is lower; and the same, though in a smaller degree, will be the case when the population contains an abnormal proportion of males, inasmuch as the male death-rate is always higher than the female death-rate.

As regards England and Wales, taken as a whole, tables are added to these Annual Reports (Tables 24, 25), which give the death-rate for each sex at each of twelve successive age-periods in each year since civil registration began; and it is to the fluctuations shown in these tables, rather than to the fluctuations in the general death-rate, that most importance should be attached by those who desire great accuracy. Limitations of time and space render it impossible to give similar tables for the subdivisions of the country. There is, however, a table (Table 26) which gives the death-rates in each county at each age-period for persons, without distinction of sex; and as the differences of sex-distribution between one county and another, or between one county and itself in different years, are not sufficiently great to cause more than a scarcely appreciable difference in their general death-rates, that table will be found sufficient for all practical purposes of comparison.

Disregarding, then, the insignificant differences due to any change that may have occurred in sex-distribution, and limiting ourselves to persons, we have in the following summary table the annual death-rates at each age-period in 1882, 1881, and the preceding quinquennium; and it will be noted that in the two years 1881 and 1882 not only did the general death-rate fall considerably below the previous record, but that the fall was shared in by each age-period; so that the conditions that prevailed in each of those two years must have been favourable in all stages of life. This is

a matter of considerable interest, inasmuch as there had previously been as was pointed out in the report for 1879, a tendency to increase in the death-rate at the later age-periods, the falling off in mortality being exclusively confined to the earlier part of life.

TABLE F.—ANNUAL DEATH-RATES at successive age-periods, per 1000 persons living at each period.

YEAR.	All ages.	0—	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85—
1876	20·9	62·6	6·1	3·6	5·3	7·0	8·8	12·8	17·6	31·0	62·6	136·7	294·1

Mean 5 years 1876-80	20·8	62·0	6·1	3·5	5·0	6·5	8·4	12·3	17·3	31·6	64·5	141·8	304·3
1881	18·9	52·1	5·7	3·2	4·6	6·0	8·1	11·9	17·0	30·8	62·7	134·5	275·1
1882	19·6	58·0	6·1	3·3	4·7	5·9	8·1	11·7	17·0	30·3	61·3	130·7	267·9

Infant mortality.—The deaths of infants in the first year of life numbered 125,020, and were in the proportion of 141 deaths to 1000 births, the mean proportion in the immediately preceding ten years having been 146 (Table 27). The infantile death-rate, as is always the case, was highest in the manufacturing and mining counties, and lowest in the agricultural counties. Thus in Lancashire it was 166, in Durham 160, in the West Riding 158, in Nottinghamshire 157, and in the East Riding and in Leicestershire 156, while in Dorsetshire it was only 93, and in Wiltshire 99.

Centenarians.—Passing from infancy to the other extremity of life, it will be seen in Table 28, that 71 persons who died in the year, namely 17 males and 54 females, were stated each to have completed a century of life, and that one of these, a navy pensioner, was alleged to have been no less than 108 years of age at his death.

Mortality at School Ages.—Among the subjects that in the course of the year were referred to the General Register Office for statistical examination was one which is of so much general interest that it may be well to give an account of it. There is, or was, a very widespread suspicion that the present educational system is acting injuriously upon the health of the children subjected to it, and the question referred to this office by the Educational Department was whether there was any statistical proof of deterioration of health in the children of school age, that is of from 3 to 15 years of age. The answer supplied from this office was as follows:—

“ We have no means of giving the death-rates of children of the precise ages 3-13, as requested, for this age-period is not one that is used by us in abstracting deaths. We can, however, give the death-rate of children of from 5 to 15 years of age, and this age-period will probably be a better one than 3-13 to test the possible effect of school-work on children's mortality; for, though the children of three and four years of age are omitted, school can scarcely be supposed to affect them in the way of injury from overwork; and, though boys and girls of 14 and 15 are included, it must be remembered that any injurious effects of overwork at

school that may exist will be carried on after the actual school-attendance is finished. The effect, if there be any, of overwork would be in the latter years of school attendance, viz., the 12th and 13th years, and the injury would cause increased mortality not only in those years but at least for some few years afterwards. The age-period, then, which we take is the decade from 5 to 15 years of age, and the periods we take for comparison are the decennia 1861-70 and 1871-80.

"The death-rate of children (5-15) in 1861-70 was 6·3 per 1000. It fell in 1871-80 to 5·1 per 1000; a decline of 19·05 per cent. The main part in this fall was due to diminished mortality from the chief zymotic diseases namely, small-pox, measles, scarlatina, whooping-cough, diphtheria, fever, and diarrhoea. These diseases caused a mortality of 2·9 per 1000 in the first decennial period, but only of 2·1 per 1000 in the second.

"But after excluding these diseases from the account, as irrelative to the question at issue, there was still a considerable decline in mortality. In the first period 1861-70 the death-rate from all causes other than zymotic was 3·4 per 1000, in the second it was only 3·0.

"But inasmuch as school work, if it be injurious to health, would probably be so by affecting the brain and, generally, the nervous system, it would be well to split up these death-rates from causes other than zymotic, into death-rates from diseases of the nervous system, and death-rates from other causes. When this is done we find that the entire fall was due to diminished mortality from other causes. The rate from these fell from 2·9 to 2·5 per 1000, whereas the death-rate from nervous affections remained unaffected. Indeed if a second place of decimals were taken it would appear that nervous diseases had, slightly, very slightly, increased.

"It would appear, therefore, that, while the mortality of children from all causes and from zymotic causes has considerably diminished, their mortality from diseases of the nervous system has exceptionally remained stationary. The general improvement has not affected this class of diseases."

TABLE G.—ANNUAL DEATH RATE per 1000 LIVING of CHILDREN aged 5-15 in ENGLAND AND WALES in the two decades 1861-70 and 1871-80.

Years.	All Causes.	Principal Zymotic Diseases.	Diseases of Nervous System.	Other Causes.
1861-70	6·3	2·9	0·5	2·9
1871-80	5·1	2·1	0·5	2·5

To the above answer to the question addressed to this office may now be added the supplementary fact that the figures for 1881 and 1882 also showed a further and considerable decline in the deaths of children of the ages in question from all causes together, and from the chief zymotic diseases, while their death-rate from nervous diseases remained in each of the two years at exactly the same point as in the two preceding decades.

It may also be well to note that tubercular meningitis or acute hydrocephalus is not included in the foregoing table among diseases of the nervous system; and that the mortality ascribed to this cause was somewhat higher in 1881 and 1882 than in 1861-70. Both in 1881 and 1882 the death-rate among children of school age from this cause was 0·22 per 1,000, whereas in 1861-70 it averaged 0·20.

These statistics doubtlessly tend to support the view that the strain of education produces in a certain proportion of children injurious effects

upon the brain and nervous system; and, indeed, that such should be the case might be anticipated, for a certain amount of risk must almost necessarily be attached to the increased use of an organ, and such risk must be accepted as the inevitable drawback from counterbalancing advantages. At the same time it is necessary to be very guarded in drawing conclusions from these figures; for it must be admitted that the causes of death to which children succumb are far from being stated in medical certificates with such care and precision as would justify us in attaching much practical importance to slight fluctuations under one or another heading.

Sex.—Of the deaths registered in the year, 265,767 were of males, and 250,887 were of females. The male death-rate was 20·7, and the female death-rate was 18·5, the mean annual rates for the preceding decennium (1872–81) having been 22·4 and 19·8 respectively. The male death-rate has therefore declined by 7·6 per cent. and the female death-rate by 6·6 per cent. from the preceding decennial mean. Out of equal numbers living of each sex there died 1118 males to 1000 females. The average proportion for the ten preceding years was 1131 to 1000. The falling off in mortality was, therefore, shared by males in higher proportion than by females.

Urban and Rural Mortality.—The death-rate in the urban population, consisting of some fifteen and a half millions of persons, was 21·1, while that of the rural population, comprising some ten and a half millions, was 17·2 (*see Table 47*). Compared with the previous ten years (1872–81) the urban rate declined 7·0 per cent., and the rural rate 8·0 per cent. Out of equal numbers living there died 123 persons in the urban to 100 persons in the rural population.

In comparing the urban and the rural mortalities with each other, it is important to remember that the age and sex distribution differs widely in the two populations, and that the differences tell largely in favour of the urban population, which contains a much smaller proportion of aged persons and a much larger proportion of persons in the prime of life, as also a much larger proportion of females, than does the rural population; and that, though these favourable conditions are somewhat counterbalanced by there being in towns a larger proportion of young children, whose mortality is always high, yet this disadvantage is by no means an equivalent for the above-mentioned advantages.

For example if we take the death-rate in England and Wales at each age-period in the last completed decennium (1871–80) as a standard, the general annual death-rate in the aggregate urban sanitary districts, including London, should have been 20·40 per 1000, and the death-rate in the aggregate rural sanitary districts should have been 22·83 per 1000, while the death-rate in the whole of England and Wales was 21·27. In other words on the hypothesis that the urban and rural districts were equally healthy, the death-rate in the former should have been 4·09 per cent. below that of England and Wales, and the death-rate in the latter 7·33 per cent. above it.

REGISTERED CAUSES OF DEATHS.

In my last Annual Report (p. xxi) I made an appeal to medical practitioners, asking them to use greater care and precision in stating the causes of deaths in their certificates. That appeal I must again repeat. The number of certificates in which the cause of death is inadequately stated is so large, that it is impossible to send out letters of inquiry asking for further information in each individual case. There were for instance no less than 1,852 certificates in the year, in which the cause of death was simply stated to be “dropsy,” a symptom of cardiac, of renal, and of

pulmonary disease alike. So far, however, as the work of the department would permit, the practice introduced in 1881 was continued through 1882, and letters of inquiry were sent out in 1844 cases. The results of some of these inquiries were as follow, and show how necessary some such practice had become. In 413 cases the assigned cause of death was pyæmia or septicæmia without further specification; it was found by inquiry that of these 413 cases 123 were connected with parturition; 170 more were due to diseases and injuries, the nature of which was given in answer to the application; while in 120 no additional information was elicited. Again, 432 letters were sent out concerning cases of women of childbearing ages, in which the assigned cause was simply peritonitis. In 179 of these it was ascertained that the peritonitis was connected with parturition; in 51 more that it was connected with assignable injuries or diseases; while in 202 no further information was elicited. Without entering into further detail, it will be enough to state that one result of the 1,844 letters of inquiry was to add no less than 428 deaths to those assigned to puerperal fever or to other incidents of childbirth. Without this correction the mortality of women in childbirth would have been 4·61 to 1000 children born alive; with the correction the rate was 5·09; a difference, amounting to no less than 10 per cent.

The assigned causes of death were distributed in the several classes as follows:—

TABLE H.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1882.	Rate per Million living.		
		1892.	1881.	1871-80.
Zymotic diseases - - -	81,560	3,088	2,660	3,727
Parasitic diseases - - -	969	37	39	57
Dietic diseases - - -	1,808	68	65	63
Constitutional diseases - -	89,684	3,895	3,328	3,597
Developmental diseases - -	41,143	1,558	1,583	1,676
Local diseases - - -	253,329	9,591	9,348	9,928
Violence - - -	17,689	669	697	737
Ill-defined and not specified causes -	30,477	1,154	1,160	1,611
All causes - - -	516,654	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of causes were 81,560, being in the proportion of 3088 to a million persons living. This rate, though higher than in the immediately preceding year, 1881, was very much lower than that in the preceding decade, 1871-80. The main decline of mortality was under the heading of diarrhoeal disorders and of continued fevers, which killed respectively 664 and 303 persons per million living, against 943 and 488 in the preceding completed decade. These declines in mortality were, however, to some extent counterbalanced by increase under several headings, namely, measles, whooping-cough, diphtheria, and puerperal fever. The deaths from measles were 481, from whooping-cough were 577, from diphtheria were 151, and

from puerperal fever were 98 per million persons living, against 379, 513, 121, and 74 respectively in the last completed decennium.

The increase of deaths under the heading puerperal fever was to a great extent due to the sending out of letters of inquiry respecting deaths ascribed to peritonitis and the like, by which 368 deaths were added to puerperal fever, which would otherwise have been classed elsewhere. Without these 368 deaths the rate would have been only 83 in 1882, against 74 in 1871-80. As puerperal fever is confined to parturient women, it is better to base its calculated death-rate on the number of births (Table 44) rather than on the number of the population. The deaths, then, ascribed to it in 1882 were in the proportion of 288 to 100,000 live-births. If we omit, for the sake of comparison with previous years, the 368 deaths due to letters of inquiry, the rate would be 247 against 209 in the decennium 1871-80. There was thus, after all correction, a very considerable and real increase in the mortality from this disease in 1882, as also there had been in the previous year 1881, when the rate, if similarly reduced for comparison, would have been 228. This increase in 1881 and 1882 in the deaths ascribed to puerperal fever was coincident, as has been almost invariably the case whenever there has been a similar increase, with an increase in the deaths ascribed to erysipelas. This coincidence deserves careful consideration on the part of those who are engaged in midwifery practice.

The increase of mortality under the heading diphtheria may also, like that from puerperal fever, very possibly be in some degree only apparent; for, as was pointed out in the last Annual Report, the returns of mortality from this disease are very untrustworthy, there being apparently no general consensus among certifying medical men as to the precise use of this term. It is not uncommon in going through the death-registers to find all the fatal cases of throat-disease in some one medical man's practice in a small area returned as cases of diphtheria, while all those in the same area in a second man's practice are returned as ulcerated throat or simply as sore-throat. Again, what some return as diphtheria, others return as croup. Putting diphtheria and croup together, as being terms at any rate frequently used interchangeably, the mortality in 1882 was at the rate of 325 per million living, against 259 in 1881 and an annual mean of 291 in 1871-80.

The increased mortality under the two headings measles and whooping-cough was real and considerable. As these diseases are mainly fatal in the first five years of life, it will be well to limit our comparison to the mortality from them at that period of life. The death-rate, then, from measles among children under five was 2.57 per 1000 in 1871-80, but was 3.55 in 1882; the death-rate from whooping-cough at that age was 3.65 in 1871-80, but rose to 4.26 in 1882.

Parasitic Diseases.—The deaths ascribed to this class of diseases were fewer in proportion to the population than in any previous year (Table 30). The decline was under the heading thrush, and was probably due to more careful specification by medical men of the cause of death in the case of infants.

Dietic Diseases.—Among the diseases in this class, the only one that requires notice is alcoholism. The deaths ascribed to this cause were 50 per million living, and more numerous in proportion to the population than in any single year since 1864, when they were 51 per million persons living. In face of the very great diminution in the consumption of alcoholic drinks, as shown by the Customs and Excise returns, and of the fact that the purveyors of spirituous drinks, as shown in the recent Census Report, declined in the interval between 1871 and 1881 by no less than 17.7 per cent. for equal populations, it seems fair to conclude that the

apparent increase in fatal intemperance did not indicate a real increase, and was due to greater conscientiousness in stating the cause of death.

Constitutional Diseases.—The deaths classed under these diseases numbered 89,684, and were in the proportion of 3395 per million population, against a proportion of 3328 in 1881, and 3597 in 1871–80.

The decline of mortality in 1882, as compared with 1871–80, was entirely under the heading phthisis, and it is noticeable that the deaths ascribed to this cause were fewer in proportion to the population in each of the three successive years 1880, 1881, and 1882 than they had ever been before (Table 30). The decline, moreover, would appear to have been real and not only apparent; for, though doubtless the term phthisis is often used in certificates with considerable looseness, yet there was no corresponding increase of mortality under those headings which might be confounded with it. So far indeed was this from being the case, that there was, coincidently with the decline in phthisis, a decline in the deaths ascribed to other forms of tuberculosis and scrofula, in the deaths ascribed to diseases of the respiratory organs, and also in the deaths ascribed to ill-defined or not specified causes. The doubt, therefore, which was expressed in a former report (Forty-second Report, p. xxx.), as to the reality of the apparent improvement in regard to tubercular mortality, though it still cannot be entirely dismissed, yet rests on a less firm basis than was the case at that time; for there was then an increase to be noticed in the mortality assigned to respiratory diseases.

The deaths ascribed to cancer were more numerous in 1882 in proportion to population than they had ever been before; but the increase under this heading, as also under the heading diabetes, may almost certainly be ascribed to increased accuracy of diagnosis and certification.

Developmental Diseases.—The deaths ascribed to old age have for many years been diminishing in their proportion to the population, and in 1882 were fewer in proportion than in any former year. As old age is the natural termination of life, and the ailment of which all prefer eventually to die, this aggregate falling off in the mortality from this cause, if real, would not be an indisputable advantage. But doubtless much of the falling off under this heading is merely due to gradual improvement in the specification of the causes of which the old die. This, however, does not account for all the apparent decline in the mortality. For there has been in each of the three years 1880, 1881, and 1882 a sensible decline in the mortality of persons of advanced age from all causes; and in 1882 especially the death-rate of persons, 55 years of age and upwards, whether males or females, was lower than it had been for very many years, probably than it had ever been before (*see* Tables 24 and 25). The main factor that determines the death-rate of the aged is temperature, and especially the temperature of the winter months; and in 1882 the mean temperature of each of the six months of the first and fourth quarters was above the average.

Passing from old age to the other extreme of life, the deaths attributed to premature birth were 12,434, being in the proportion of 1399 such deaths to 100,000 live births. The proportion of such deaths to births has been apparently increasing. In the quinquennium 1871–75 the ratio was 1260 to 100,000 live-births; in the next quinquennium 1876–80 the rate rose to 1338; in 1881 it was 1363; and finally in 1882 it was, as before stated, 1399. Moreover, concomitantly with this increased mortality from premature birth, there was an increase in the deaths ascribed to congenital malformations. In the quinquennium 1871–75, these deaths were 185 per 100,000 live-births; in 1876–80 the rate rose to 239; in 1881 it was 249; and finally in 1882 as much as 254. As the infantile death-rate from all causes together has not been increasing, it is at any rate allowable to

suspect that the apparently increased mortality from premature birth and from congenital malformation has been only apparent, and due to transference of deaths from one alleged cause to another, the certification of causes of death in the case of infants being always extremely vague. Still it is not impossible that the apparent increase of premature births may be real, and connected with the marked increase in the employment of women in industrial occupations, as shown in the recent Census Returns.

Local Diseases.—In this group, which comprises nearly a half of all deaths, there was a considerable falling off of mortality as compared with the decade 1871–80, but a slight rise as compared with the year 1881. The decline of mortality was mainly under the headings convulsions, liver disease, and diseases of the respiratory organs. The mortality from diseases of the nervous and of the circulatory systems remained very nearly at the previous decennial average; while the mortality ascribed to diseases of the urinary system continued to increase, as it had done for many previous years, doubtlessly in consequence of more accurate diagnosis and specification of causes, by which the mortality from ill-defined and non-specified causes, has undergone progressive decrease.

Violent Deaths.—In this group there was a considerable decline of mortality, compared both with the immediately preceding year 1881, and with the preceding decade. The decline was in the deaths from accident and negligence, which were fewer in proportion to the population than in any year included in the table (Table 30), which goes back as far as 1859.

Of the deaths ascribed to accident and negligence about one quarter are of children under five years of age, and of these nearly one half are of infants in their first year of life. The form of accident to which by far the greatest part of these infantile deaths is due is suffocation in bed. As might be anticipated there is practically no difference in this first year of life between boys and girls in regard to their liability to fatal accidents. But no sooner is the first year completed, than a marked difference of such liability begins to manifest itself between the sexes. Already the boys begin to show a more venturous character and to display greater readiness to amuse themselves with fire, water, horses, and other dangerous attractions; and this difference increases with each successive year of childhood. Taking the returns for the last quinquennium, 1878–82, as a basis, it is found that the fatal accidents of males are 6 per cent. more numerous than the fatal accidents of females in the first year of life, a difference which corresponds pretty closely with the difference between the number of boys and girls living at that age. In the second year, the male accidents are 30 per cent. more numerous than the female; in the third year 51 per cent. more numerous; in the fourth year 61 per cent. more numerous; and in the fifth year of life the excess is no less than 74 per cent. After this age, the influence of occupation begins to come into operation, and the fatal male accidents are almost four times as numerous as the fatal female accidents.

It must not be supposed that this much greater liability of males to fatal accident is in any material degree the explanation of the higher death-rate of the male sex. The total mortality from violence is too small to affect the general death-rate to any great extent; and such small difference as is produced by this cause in the death-rates of the two sexes is to a very great extent counterbalanced by the mortality of females from childbirth and puerperal fever. The death-rate of males in the last completed decade (1871–80) was 22·61 per 1000, and that of females 20·00. Had there been no deaths either from violence or from childbirth and puerperal fever, the death-rates would have been 21·49 and 19·32.

Ill-defined and non-specified Causes.—It has already been stated that the number of deaths in which the cause is imperfectly stated has declined in a most satisfactory manner. I feel bound, however, to repeat the complaint made in my last report, that the class of cases in which more than in any other there is a right to expect careful and complete statement of cause of death, namely, those cases in which there is public inquiry at public expense into the circumstances attending the death, by no means fulfils that just expectation. For instance, in the year 1882, out of the inquests held in the registration district and city of Norwich, there were 55 in which the death was not due to violence but to some kind of disease. In only 13 of these 55 cases was the kind of disease stated in the verdict; in the remaining 42 cases the finding was simply worded “natural causes,” which for all purposes of classification of death by their causes is, I need hardly say, quite useless.

Certification of the Causes of Death.—The causes of 469,117 or 90·8 per cent., of the 516,654 deaths were certified by registered medical practitioners; while the causes of 27,367 or 5·3 per cent. were certified by coroners. The causes of the remaining 20,170, or 3·9 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. Thus excluding the metropolitan counties of Middlesex and Surrey, the percentage did not exceed 1·1 in Wiltshire, 1·4 in Rutlandshire, and 1·7 in Berkshire, while it ranged upwards to 6·2 in Herefordshire, 6·7 in Cumberland, and 6·9 both in Cornwall and in Durham. In the metropolis the proportion did not exceed 1·2 per cent., whereas in Wales it was 10·4 per cent.

The proportion of uncertified deaths showed a further slight decline from the proportions in 1880 and 1881, which were 4·3 and 4·1 per cent. respectively.

PROGRESS OF REGISTRATION.

During the year 1882 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,814,478. At the close of the year the aggregate number of names in these indexes, which on 31st December 1882 embraced a period of 45½ years, was 66,619,275. The total number of searches in 1882 (including those in non-parochial and other records) was 33,597, showing an increase of 1292 or 4·0 per cent. upon the number in the previous year; the number of certificates issued was 27,551, or 3·7 per cent., more than in 1881. The amount received as fees for searches and certificates in the year 1882, and paid into Her Majesty's Exchequer, was 5,170*l.* 1*s.* 0*d.* (Table 48.)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi.-xxii. and xxv.-xxvi.

MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 189,229, and that the number of deaths was 2224; so that the rate of mortality was 11·8 per 1000, against 14·0 in 1881, 17·6 in 1880, and 22·2 in 1879.

The average strength of the Army at home was 94,295, and the deaths were 806; while the average strength of the Army abroad was 94,934, and the deaths were 1418. The death-rate at home was, therefore, 8·5 per 1000, and the death-rate abroad 14·9. (See Tables 54-61.)

MORTALITY IN THE NAVY.*

The total force in the service afloat, corrected for time, in 1882 was 43,475. The deaths were 413, of which 299 were due to disease and 114 to injury. The death-rate from disease alone was 6·87 per 1000, and from violence 2·62 per 1000, against 5·27 and 5·67 respectively in the preceding year, 1881. The great difference in the death-rate from violence in the two years was due to the large loss of life in 1881 from the explosion on board the "Doterel."

Of the 114 deaths from violence 42 were due to wounds received in action, 36 to drowning, 13 to falls from aloft, 2 to suicide, and 21 to other forms of violent death.

The assigned causes of the 299 deaths due to disease were as follow:—

Eruptive fevers	-	-	3	Diseases of—		
Continued fevers	-	-	81	Circulatory system	-	24
Paroxysmal fevers	-	-	25	Absorbent system and ductless glands	-	1
Other febrile diseases	-	-	8	Respiratory system	-	45
Rheumatism	-	-	5	Digestive system	-	38
Tubercular diseases	-	-	40	Urinary and generative system	-	6
Other constitutional diseases	-	-	2	Cellular tissue, and cutaneous system	-	2
Diseases of nervous system and of organs of special sense	-	-	17	Debility, &c.	-	2

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1882 the entries recorded in this Register were 353 births and 5040 deaths. Of these 5040 deaths, 2116 were returned as of English origin, and 388 were simply described as of "British" origin.

Among *passengers* on board merchant vessels at sea (see Table 62), 266 births and 678 deaths were reported during 1882; the deaths showed an increase 10·8 per cent. upon the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 63), that the number of merchant seamen at sea in registered vessels during 1882 was 195,937. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during 1882 were 4659, equal to a rate of 23·8 per 1000 of the strength, exceeding by 2·4 the average annual rate (21·4) during the 31 years 1852–82.

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

EUROPEAN STATES.

In Tables 73-87 will be found international vital statistics relating to thirteen of the principal European States, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 73 affords the means for comparing the marriage, birth, and death rates in each State in a series of years, with the mean rate in each series; Tables 74-87 contain detailed returns for each State.

The general recovery in the *marriage-rate* observable in the different European States in 1881 continued in 1882, except in the Netherlands, Denmark, Belgium, and France. In Italy the rate, although lower than that recorded in 1881, was above the mean rate in the 18 years 1861-80. The rates in 1881 ranged from 12.7 in Sweden, 13.4 in Norway, and 13.6 in Switzerland, to 15.6 in Prussia, 15.7 in Italy, 16.4 in Austria, and 20.3 in Hungary. The rate in England and Wales was 15.5.

The *birth-rates* in the various States differed but little from those of the previous year, but varied in almost constant relation with the variations of the marriage-rate. The birth-rates ranged from 24.8 in France, 28.8 in Switzerland, and 29.4 in Sweden, to 37.1 in Italy, 37.2 in the German Empire, 37.3 in Prussia, 38.9 in Austria, and 44.6 in Hungary. The birth-rate in England and Wales was 33.7 per 1000. In France there were 1619 fewer marriages, and 1481 fewer births than in the previous year; and the marriage and birth-rates in 1882 were considerably below the mean rates during the 20 years 1861-80.

With the exception of Norway the *death-rates* in the various States in 1882 were below the respective average rates in preceding years. In Sweden, Norway, and Denmark, the death-rates in 1882 did not exceed 17.4, 18.4, and 19.5 respectively; the next lowest was 19.6 in England and Wales. The highest rates were 25.7 in the German Empire, 27.5 in Italy, 30.8 in Austria, and 36.6 in Hungary.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF THE YEAR 1882.

BY JAMES GLAISHER, ESQ., F.R.S., &c.

The following remarks with regard to the excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The readings of the barometer in the first 6 days of the year were below their average values, the mean daily deficiency being 0·23 in.; for the 49 days from January 7th to February 24th they were mostly above, the mean daily excess being 0·51 in.; from February 25th to March 6th they were below by 0·55 in.; from March 7th to the 19th the daily excess averaged 0·33 in.; from March 20th to April 2nd the readings were on the average in defect by 0·09 in.; from the 3rd to the 10th they were in excess by 0·25 in.; from April 11th to the 18th the mean readings were 0·32 in. below their averages, then slightly above for 3 days; from April 22nd to May 5th the readings were 0·34 in. below their averages; then for 14 days above by 0·33 in.; from May 20th to May 26th the readings were 0·21 in. below; they were above from May 27th to June 2nd by 0·26 in., then for 12 days they were 0·19 in. below, and for 3 days somewhat above; from June 18th to the 24th the readings were in defect by 0·12 in. daily, from June 25th to July 3rd they were about 0·11 in. in excess, from the 4th to the 18th there was a deficiency of 0·33 in. daily, then for 3 days there was a slight excess, followed by 4 days of a slight deficiency. From July 26th the readings were high for 17 days, being on the average 0·29 in. in excess, then they were low for 23 days, to September 3rd, being on the average 0·24 in. in defect; from September 4th to September 9th the readings were 0·18 in. above their averages; then for 31 days, to October 10th, there was an excess of pressure of 0·24 in. From October 11th to 13th the readings were 0·21 in. below the average, then for 5 days they were nearly of the average value; for the 24 days from October 19th to November 11th the mean daily deficiency was 0·27 in. November 12th and 13th were nearly of their average value, the 3 days November 14th to 16th were 0·33 in. below their average, then 2 days of nearly the average value were followed by 9 days of low readings, the deficiency being 0·35 in.; from November 28th to December 2nd there was a slight excess, followed by low readings on every day excepting the 19th and 20th to the end of the year, the average daily deficiency being 0·35 in.

The highest reading in the year at the height of 150 feet was 30·784 inches on January 18th, and the lowest 28·613 inches on October 24th; thus giving a range of 2·171 inches.

Temperature.—Till the 16th day of January the weather was warm; on the 17th a cold period set in and continued till the 26th, the average daily deficiency of these 10 days was 2°·6; on the 27th the weather became suddenly warm, and continued till the end of the month, the excess being 4°·4 daily; then for 10 days it was cold, the deficit being 3°·3; from February 11th to April 24th, a period of 73 days the temperature was warm, being 4°·3 above its average; from the 25th to May 1st, the average daily deficit of these 7 days was 3°·9, for 12 days the weather was rather warm, then for five days it was cold, averaging 2°·6 daily; from May 19th to the 31st, there was an excess of 2°·5; this was followed by 122 days of cold, the mean deficiency of which was 2°·2; from the 1st of October to the 15th the temperature was in excess, being 2°·3 daily; then from the 16th to the 30th, the deficit was 1°·3; from October 31st to November 10th the excess of mean temperature was 3°·9; these 11 days

were followed by another period of the same length, the deficiency being $3^{\circ}\cdot8$ daily; for 5 days the temperature was warm, being $5^{\circ}\cdot5$ above the average, then for 19 days it was cold, the deficiency being $5^{\circ}\cdot6$ daily; and from December 16th to the end of the year the excess of mean temperature was $6^{\circ}\cdot8$; the last few days were very warm, being $12^{\circ}\cdot4$, $15^{\circ}\cdot7$, $15^{\circ}\cdot2$, $13^{\circ}\cdot9$, $12^{\circ}\cdot8$, and $12^{\circ}\cdot6$ respectively above their averages, and the mean of these six was $13^{\circ}\cdot8$.

The highest temperature of the air in the year was 81° on August 12th, and the lowest was $24^{\circ}\cdot0$ on December 24th, thus giving a range of $57^{\circ}\cdot0$.

Rainfall.—The fall of rain about London in January was $1\cdot35$ in.; in February was $1\cdot14$ ins.; in March $1\cdot14$ ins., being respectively $0\cdot55$ in., $0\cdot44$ in., and $0\cdot41$ in., below their averages. The fall in April was $2\cdot40$ ins., being $0\cdot65$ in. above its average; in May was $1\cdot37$ in., being $0\cdot71$ in. below its average; in June was $2\cdot35$ ins., being $0\cdot35$ in. above its average. In July the fall of rain was $2\cdot45$ ins.; in August was $1\cdot16$ in.; in September was $2\cdot40$ ins., being respectively $0\cdot11$ in., $1\cdot29$ in., $0\cdot01$ in. below their averages. The fall in October was $5\cdot42$ ins., being $2\cdot62$ ins. above its average. In November it was $2\cdot19$ ins., and in December was $1\cdot78$ in., being respectively, $0\cdot15$ in. and $0\cdot22$ in. below their averages. The total fall during the year was $25\cdot2$ ins. The total falls of rain ranged from $61\cdot73$ ins. at Bolton, $60\cdot23$ ins. at Stonyhurst, $54\cdot75$ ins. at Barnstaple, to $26\cdot23$ ins. at Royston, $26\cdot45$ ins. at Cambridge, and $27\cdot14$ ins. at Camden Square.

Thunderstorms occurred on 59 days during the year, of these 13 were in June, 10 in November, 8 in May, 7 in both August and September, 5 in both April and July, 3 in October, and one in March.

Thunder was heard but lightning was not seen on 57 days during the year. The greatest number of days in one month was 15 in June, and the least was one in October. Thunder was not heard at any place in January, February, March, or December.

Lightning was seen but thunder was not heard on 34 days during the year, none of which were in January, February, or March.

Solar halos were seen on 55 days during the year. On 11 in November, 8 in September, 7 in May, 6 in July, 4 in March, April, and December, 3 in February, 2 in January, June, August, and October.

Lunar halos were seen on 45 nights in the year. On 8 in both November and December, 7 in March, 6 in October, 5 in January, 4 in September, 3 in April and May, one in August, and none in February, June or July.

Aurora Boreales were seen on 17 days during the year, on 8 in November, 4 in October, 3 in February, and 2 in December.

Snow fell on 42 days during the year, 15 in December, 14 in November, 4 in March, 3 in January, 2 in both February and October, and one in April and May.

Hail fell on 116 days during the year, 19 of which were in November, 16 in March, 13 in January and April, 11 in February, 10 in June, 9 in December, 8 in May, 6 in October, 5 in July, and 3 in both August and September.

Fog prevailed on 155 days during the year, and they were distributed as follows: January 17, February 12, March 12, April 9, May 9, June 8, July 5, August 10, September 21, October 17, November 15, and December 20.

PRELIMINARY TABLES.
(1882.)

TABLE 1.—ENGLAND.—Population, Marriages, Births, and Deaths registered in the Forty-five Years 1838-82.

YEARS.	Estimated POPULATION in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,009	118,067	226,134	462,787	342,700	120,027
1839	15,514,255	122,106	244,232	462,574	338,964	123,590
1840	15,730,812	122,065	245,230	502,908	339,887	163,021
1841	15,929,492	122,406	244,802	512,188	342,947	169,211
1842	16,130,226	118,925	237,850	517,789	349,519	168,270
1843	16,332,228	122,818	247,636	527,225	348,445	178,780
1844	16,535,174	122,249	244,498	540,763	355,583	185,180
1845	16,739,126	143,743	287,486	548,281	349,266	199,015
1846	16,944,082	145,664	291,328	572,825	360,215	212,610
1847	17,150,018	125,845	271,690	539,965	429,204	110,761
1848	17,358,862	122,220	276,400	562,029	369,222	192,807
1849	17,564,656	141,883	283,766	576,129	440,229	135,900
1850	17,773,324	152,744	305,488	528,422	362,965	165,457
1851	17,982,940	154,206	308,412	615,945	395,296	220,649
1852	18,193,206	152,782	317,564	624,012	407,125	216,887
1853	18,404,368	164,520	329,040	612,291	421,097	191,194
1854	18,616,210	159,727	319,454	624,406	427,205	197,201
1855	18,829,000	152,112	304,226	625,042	425,708	200,340
1856	19,042,412	159,237	318,474	627,422	390,206	237,216
1857	19,256,516	159,097	318,194	622,071	419,215	202,856
1858	19,471,291	156,070	312,140	655,481	449,856	205,625
1859	19,686,701	167,722	335,446	629,821	440,721	189,100

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the last five Censuses taken. For the estimated numbers of males and females in each year, and population estimates for years prior to 1838, see Table 71.

TABLE 2.—ENGLAND.—Persons Married, Births, and Deaths to 1000 living in the Forty-five Years 1838-82.

Mean Annual Rate to 1900 in each quarter of the 45 years -					13·6	16·6	15·8	19·4

* The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For these inequalities corrections have been made in the above calculations.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (225 of 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons; the quotation for 1882 is the mean of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

NOTE.—The Deaths in the cols. 3 to 6 are estimated for each year on the assumption that the nationalities of the soldiers were in the same proportions as at the preceding Census. (See Table 60.)

TABLE 62.—Births and Deaths among Passengers (British Subjects), including Soldiers, Marines, and invalided Seamen from the Royal Navy on board Merchant Vessels at Sea, in the Twenty-seven Years 1856-1882, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Shipping and Seamen at the Termination of their respective Voyages in Ports of the United Kingdom.

(Furnished to the Registrar General by the Registrar General of Shipping and Seamen.)

Thirty-one years 1852-82	5,816,092	124,703	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 64.—MERCHANT SERVICE. Seamen reported to the BOARD OF TRADE as having died in 1882. (*Parliamentary Return, Session of 1883.*)

TABLE 72.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1882.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
14	LONDON CITY - -	1882. 1 January -	The sub-districts of <i>Castle Baynard</i> and <i>Alhallowes Barking</i> were united under the name of <i>Alhallowes Barking</i> (aggregate population 13,868).
163	BRIXWORTH - -	1 July -	The sub-districts of <i>Spraton</i> and <i>Brixworth</i> were united under the name of <i>Brixworth</i> (aggregate population 8,847).
215	PLOMESGATE - -	" -	The sub-districts of <i>Earl-Soham</i> and <i>Framlingham</i> were united under the name of <i>Framlingham</i> (aggregate population 5,320).
242	CRICKLADE - -	" -	See CIRENCESTER 331.
247	DEVIZES - -	1 January -	The sub-district of <i>Bromham</i> was abolished, and the sub-districts of <i>Devizes</i> and <i>Lavington</i> re-arranged as follows:— <i>Devizes</i> sub-district comprising St. John Devizes, St. Mary Devizes, St. James Devizes or South-broom, All Cannings, Allington, Alton-Barnes, Bishop's Cannings, Bromham, Chittoe, Etchilhampton, Full-away, Foulshot, Rowde, Stanton St. Bernard, and Stert (aggregate population 13,256); and <i>Lavington</i> sub-district, comprising Beeching-Stoke, Chirton, Earl Stoke, Easterton, Great Cheverell, Little Cheverell, Marden, Market Lavington, Marston, Patney, Potterne, Urchfont, West Lavington, and Worton (aggregate population 7,274).
250	WESTBURY - -	1 August -	The sub-district of <i>Edington</i> was abolished. The parishes of Keovil, Steeple-Ashton, and Great Hinton (aggregate population 1,414), were added to <i>Bradley</i> sub-district, and the remainder, consisting of the parishes of Edington, East Coulston, and Bratton in Westbury civil parish, (aggregate population 1,686) were added to <i>Westbury</i> sub-district.
331	CIRENCESTER - -	1 July -	The parish of Marston-Maisey (population 185) was transferred from the sub-district of <i>Fairford</i> to that of <i>Cricklade</i> (242 : 2).
419	GRANTHAM - -	1 April -	The sub-districts of <i>Colsterworth</i> and <i>Denton</i> were united under the name of <i>Grantham South</i> , except that the parish of Somerby (population 1,189) was transferred to <i>Grantham</i> , now <i>Grantham North</i> , and the parish of Barrowby (population 807) was transferred from <i>Grantham North</i> to <i>Grantham South</i> .
431	NOTTINGHAM - -	1 July -	The sub-districts of <i>Castle</i> and <i>Park</i> were united under the name of <i>Park</i> (aggregate population 16,237); and the sub-districts of <i>Hyson Green</i> and <i>Radford</i> were united under the name of <i>Radford</i> (aggregate population 20,964).
497	BRADFORD - -	1 August -	The township of Manningham (population 37,304) was transferred from the sub-district of <i>Horton</i> to that of <i>Bradford West End</i> .
513	HOWDEN - -	" -	The sub-district of <i>Newport</i> was re-named <i>Wallingfen</i> .
530	BRIDGEND - -	1 November -	The parishes of Llanharan, Llanillid, and Peterstone (aggregate population 890) were transferred from the sub-district of <i>Maesteg</i> to that of <i>Cowbridge</i> , and the parishes of Higher Coychurch, Lower Coychurch, and Pencoed (aggregate population 1,355) were transferred from the <i>Maesteg</i> sub-district to that of <i>Bridgend</i> .
595	LLANDOVERY - -	1 October -	The new civil parish of Quarter Bach formed out of part of the parish of Llangadock (population 1,475) was transferred from the <i>Llangadock</i> sub-district to that of <i>Llandeibis</i> (596 : 5).
596	LLANDILOFAWE - -	" -	See LLANDOVERY 595.
629	CONWAY - -	" -	The sub-districts of <i>Llechudd-Isaf</i> and <i>Conway</i> were united under the name of <i>Conway</i> (aggregate population 6,801).

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," small changes were made on the 26th March 1882 in the constitution of the following Districts:—ORSETT (190), CHELMSFORD (192), BLANDFORD (280), WYMOUTH (364), DOORCHESTER (265), CLEBOURY MORTIMER (347), KIDDERMINSTER (376), DROITWICH (383), BROMSGROVE (384), BOSTON (417), HORNCASTLE (421), SPILLSBY (422), RUNCORN (446), NORTHWICH (447), ROTHERHAM (510), DONCASTER (511), DURHAM (540), HOUGHTON-LE-SPRING (551), and CHESTER-LE-STREET (552).

1882	37,781,000	226,480	452,920	926,126	626,539	14.8	24.8	22.2

NOTE.—The population in the four years 1863-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 86.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTION PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,808	150,781	261,463	634,086	417,784	16·5	39·3	26·3
1862	16,065,194	128,696	267,802	615,919	430,663	16·0	38·3	26·8

1864	16,340,323	126,308	252,606	629,546	469,486	15·6	38·5	28·6
1865	16,422,793	128,917	267,834	632,050	538,580	15·7	37·9	32·8
1866	16,579,090	131,981	268,902	618,981	463,084	15·9	37·3	28·0
1867*	16,716,151	118,409	266,818	634,212	487,151	14·2	37·3	29·1
1868	16,858,212	111,684	222,568	579,464	548,600	13·8	34·4	32·6
1869	16,863,966	137,120	274,240	602,287	530,600	16·2	35·7	31·6
1870	16,935,813	105,543	211,066	596,786	506,609	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for Years subsequent to 1861 has been deduced from the Excess of Births over Deaths registered in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* Census year.

TABLE 87.—ITALY. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1864 to 1882.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1875.
* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1882.

Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are entered in these Abstracts as bachelors and spinsters.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† 1. The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

* The Superintendent Registrars' Districts (630 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (3162 in number at the end of the year 1882) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; W indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1882 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

* 629 : 1.—For changes made on 1st October 1883 in the constitution of the Conway Sub-district, see Table 72.

† 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llanddydog, and Amiweh Sub-districts) and Holyhead (Bryngwran, Llanddausaunt and Holyhead Sub-districts).
The parishes of Bodewydd and Rhosbedro, however, situated in Llanddausaunt Sub district belong to the Union of Anglesey and not to the Union of Holyhead.

DEATHS IN PUBLIC INSTITUTIONS.

1882.

THE following pages contain the numbers of deaths registered during 1882 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1546 Institutions; of which 725 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 732 Hospitals or Infirmaries; and 89 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1546 Institutions 52,472 deaths were registered during the year, or 10·2 per cent. of the total deaths in England and Wales, against 9·4 and 10·8 per cent. in the two preceding years; 33,041 occurred in Workhouses, 14,550 in Hospitals, and 4,881 in Lunatic Asylums. The proportion to total deaths was 6·4 per cent. in Workhouses, 2·8 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1882.

* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

Of the above 11,406 ACCIDENTS, 94 are stated to have occurred to Persons in a state of INTOXICATION, and 10 to Persons suffering from DELIRIUM TREMENS. And in 335 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each *Registration District* in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigan District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	195; 4	Barton . . .	Glanford Brigg	425; 3

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-FIFTH ANNUAL REPORT.

	PAGES
ACCIDENT ; Male mortality from, exceeds the Female after the first year of life	xx
deaths from, at various Ages	211-217
AGES ; Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows, 1867-82. (Table C.)	viii
Marriages of Bachelors and of Spinsters per 1000 living at successive life periods 1870-71-72 compared with 1880-81-82. (Table D.)	ix
Minors married in 1882, and the per-centage to total marriages	ix
at Death	xiii
Death-rates at successive life-periods, 1876-82. (Table F.)	xiv
Deaths under one year	xiv
Deaths over 100 years	xiv
Deaths at School Ages. (Table G.)	xiv-xv
at Death, of Males and Females in each year, 1888-82. (Tables 21, 22.)	xlviii-xlix
Mortality of Males and Females at 12 groups of, 1888-82. (Tables 23-25.)	l-iii
Mortality in Counties, at 12 groups of, in 1882. (Table 26.)	liii
of 348,888 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows	26-28
at Death, of Males and Females registered in Divisions, Counties, and Districts	115-136
at Death, of Males and Females from different Causes	137-145
at Death, of Males and Females, in London, from different Causes	146-153
ALCOHOLISM ; increase of, probably only apparent	xviii
AREA in Acres and Hectares of the United Kingdom and its parts. (Table 49.)	lxxxix
in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 51.)	lxxxix
in Acres of each Division, County, and District	2-24
in Acres of each District and Sub-district	32-91
ARMY ; Strength and Mortality of, in 1882	xxi
Average Strength of, at Home in 1882. (Table 54.)	lxxxiv
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1868-82. (Table 55.)	lxxxiv
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 56.)	lxxxiv
Average Strength Abroad in each Year 1879-82. (Table 57.)	lxxxv
Deaths in, in Great Britain, Ireland, and Abroad in each Year, 1879-82. (Table 58.)	lxxxv

	PAGES
ARMY—continued.	
Death-rate at Home and Abroad in each Year, 1859–82. (Table 59.)	lxxxv
Nationality of, in 1861–71–81. (Table 60.)	lxxxvi
Deaths in, in each Year, 1858–82, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 61.)	lxxxvi
AURORÆ BORÉALES in 1882	xxv
AUSTRIA ; Marriage, Birth, and Death-rates in each Year, 1861–82. (Table 73.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–82. (Table 78.)	civ
ATMOSPHERIC PRESSURE in 1882	xxiv
BANKERS' CLEARING HOUSE ; amount cleared per head of population, 1868–82. (Table A.)	vi
BELGIUM ; Marriage, Birth, and Death-rates in each Year, 1861–82. (Table 73.)	ci
Estimated Population; Number and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853–82. (Table 84.)	cvi
BIRTHS in 1882	x
Sex proportions of	xi
Illegitimate, Proportion to total Births and to Population	xi
Illegitimate in Workhouses. (Table E.)	xi–xii
of British Subjects at Sea	xxii
registered, and excess over Deaths, in each Year, 1838–82. (Table 1.)	xxviii
in each Quarter of the Years 1838–82. (Table 12.)	xxxix
in each Year 1838–82; Legitimate and Illegitimate in 1842 and 1845–82, and Proportion of Males and Females. (Table 13.)	xl
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1872–82, and the mean of 10 Years, 1872–81. (Table 14.)	xli
in Counties, in 1882. Numbers, Sex, Legitimate and Illegitimate; Proportions of Males to Females. (Table 15.)	xlii
proportion of Males and Females born in Counties in each Year, 1872–82, and the mean of 1872–81. (Table 16.)	xliii
in the United Kingdom and its parts. (Table 49.)	lxxxi
of British Subjects at Sea in each Year, 1856–82. (Table 62.)	lxxxvii
in Divisions and Counties, distinguishing sex, Legitimate and Illegitimate	30–31
in Divisions, Counties, Districts, and Sub-districts, distinguishing sex, Legitimate and Illegitimate	30–91
excess over Deaths, in Divisions, Counties, Districts, and Sub-districts	30–91
Illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in 1882 the lowest since 1853	x
disparity in several Counties, and apparent causes	x
Illegitimate, slight decline of	xi
average annual Illegitimate, per 1000 unmarried women, aged 15–45. 1880–81–82. (Table E.)	xii
in each Year, 1833–82, and the mean of 45 Years. (Table 2.)	xxix

	PAGES
BIRTH-RATE—continued.	
means of 45 years 1838-82, and of decennial and quinquennial periods 1838-80. (Table 3.)	xxx
in each Quarter of the Year 1838-82. (Table 12.)	xxxix
in each Year, 1838-82, and Legitimate and Illegitimate rates in 1842 and in 1843-82. (Table 18.)	xl

TWENTY-SIXTH
DETAILED ANNUAL REPORT
OF THE
REGISTRAR-GENERAL
OF
BIRTHS, DEATHS, AND MARRIAGES
IN SCOTLAND.

[A B S T R A C T S O F 1 8 8 0.]

Presented to both Houses of Parliament by Command of Her Majesty.

EDINBURGH:
PRINTED BY NEILL AND COMPANY,
FOR HER MAJESTY'S STATIONERY OFFICE.
1884.

REPORT

TO THE RIGHT HON.

SIR WILLIAM VERNON HARCOURT, Q.C., M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 2nd February 1884.

SIR,

I had the honour in 1881, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 & 18 Vict. cap. 60, to transmit to you, as Secretary of State for the Home Department, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1880, along with the usual explanation and commentary.

At the same time, my Sixteenth Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 & 27 Vict. cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births,

iv *Report of the Registrar-General to the Secretary of State.*

Deaths, and Marriages registered in Scotland during the same year (1880).

I have the honour to be,

SIR,

Your most obedient Servant,

STAIR AGNEW,

Registrar-General.

CONTENTS.

Report of Registrar-General to the Secretary of State,	Page iii
Report by Dr Cunynghame to the Registrar-General,	ix
Table of Estimated Population, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the years 1855-1880 inclusive, and their Proportions to the Population; showing also the excess of Births over Deaths,	ix
Population,	ix
Tables showing the Number and Proportion of Births, Deaths, and Marriages in the Principal Town, Large Town, Small Town, Mainland-Rural, and Insular-Rural Districts, during each of the years 1855-1880,	x & xi
Table showing the Number and Proportion of Births, Deaths, and Marriages in each of the Eight Principal Towns of Scotland during 1880,	xii
Occasional Table, showing the State of Illegitimacy in all Scotland, in the Five Groups of Districts, Principal Towns, and Two Counties in 1880,	xii

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR CUNYNGHAME, M.D., F.R.S.E.

SIR,

During the year 1880 that indication of improvement in commercial matters which had shown itself towards the end of the year previous was continued, and in fact this last may be almost termed a somewhat prosperous year after so long a period of depression. The agricultural outlook was not yet bright, but the seasons were on the whole better; the temperature throughout the year being generally higher, the sunshine of greater intensity than for some time, and the average rainfall rather less than that for 1879. The proportion of marriages among the population still shows a falling off, as also does the birth-rate, which is the lowest for many years, and is a natural consequence of the former. The death-rate is, however, low, although somewhat higher than during 1879.

POPULATION.

In this as in last Report the estimates of population made use of are obtained from the Census numbers of 1881, it being found more

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1880, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.

correct to estimate back from the latter than onwards from the Census enumerations of 1871, as was necessarily the case up to the publication of the Detailed Annual Report of 1879, when the last Census numbers were first available. We accordingly find that, at the 30th June 1880, the estimated population of Scotland is 3,705,994, of whom 1,783,950 are males, and 1,922,044 females. They are distributed over the five groups of registration districts into which Scotland is divided as follows:—In the Principal Town Districts, 1,193,128; in the Large Town Districts, 439,403; in the Small Town Districts, 865,459; in the Mainland Rural Districts, 1,077,497; and in the Insular Rural Districts, 130,507.

TABLE II.—Population of Scotland, in its Five Groups of Districts, by the Censuses of 1871 and 1881, and estimated to the middle of 1880.

Principal Towns above 25000 inhabitants. Large Towns above 10000 and under 25000 inhabitants. The Small Towns from 3000 to 10000 inhabitants from 1855 to 1871—but from 1871 and upwards the Small Towns have from 2000 to 10000 of population.

BIRTHS.

124570 births were registered in Scotland during the year 1880, being at the rate of 336 births in every ten thousand of population, or 3·3613 per cent. This is the lowest number of births which has taken place in the country in any one year during the last five, and the smallest proportion to the total population since 1855.

Of the above, 63786 were males, and 60784 females, an excess of the former over the latter of 3002.

Of the total 124570 births, 42903 were referred to the Principal Town districts, constituting in this group a birth-rate of 3·596 per cent. In the Large Town districts 15734 births took place, or 3·581 per cent. of a birth-rate. In the Small Town group they numbered 29843, or 3·448 per cent. In the Mainland-Rural districts 32790 natal events occurred, being at the rate of 3·043 per cent., while the Insular-Rural districts claimed of such 3300, or a birth-rate of 2·529 per cent. Tables III. and IV.

10589 of the total births registered in Scotland during 1880 were returned as illegitimate, showing that 8·50 per cent. of the births come under this denomination, a slight decrease upon those of like nature in the previous year.

In Tables Va. and Vb. is found some information as to the number and proportion of illegitimate births in the Principal Towns of Scotland, and in each of the five registration districts into which it is divided, as also for the two counties of Banff and Wigtown, the inhabitants of which

in the greatest proportion apparently omit to undergo a regular marriage ceremony.

In the latter Table, we have the proportion of illegitimate births to the estimated number of unmarried women and widows living in each locality at ages between 15 and 45.

Of the 124570 live births registered in Scotland during the year 63786 were of the male sex, and 60784 of the female. Thus for every hundred female live births we have 104·9 male births. Among the legitimate alone the proportion is 104·4 male to every hundred female births; whilst among the illegitimate alone there were 110·0 male for every hundred female births.

In 1438 cases the births were twin, and in 8 cases triplet, so that the number of mothers in Scotland who during the year bore live children was 123116, and of those mothers one in every 85·5 bore twins, and one in every 15389·5 bore triplets.

The above numbers refer solely to the children born alive, as still births are not accounted for to the Registrar-General.

On Table Va. is seen the number of births in each of the eight Principal Towns during the year, and their proportion per cent. to the population. In Leith the rate is highest, being 3·894 per cent., or almost 39 per 1000; Greenock comes next with 3·846 per cent. or 38 per 1000; Edinburgh being lowest with 3·338 per cent. or 33 per 1000.

The birth-rate per 1000 of population during 1880 was in the

undernoted countries as follows:—In England and Wales 34·2; in Denmark 31·8; in Sweden 29·4; in Austria 37·3; in Prussia 37·9; in the Netherlands 35·6; in Hungary 42·9; in Switzerland 29·6; in Italy 33·6; and in Scotland, as before mentioned, 33·6.

MARRIAGES.

The number of marriages which took place in Scotland during the year under review was 24505, which is an advance in number upon those solemnized during 1879, of 986, but in the proportion of only 0·6346 per hundred of estimated population, or 63 in every ten thousand,—the lowest rate that has been experienced in the country since the commencement of these Reports. In England the marriage-rate was 74 per ten thousand of its inhabitants. In the Mainland-Rural and Insular-Rural districts of the country the number of marriages is under that of last year by 63, to the extent of 15 in the former, and 48 in the latter; in the other three divisions they are increased, in the Principal Town group to the extent of 273; in the Large Town group by 310; and in the Small Town group of districts by 466;—the marriage-rate per ten thousand of the population being in the Principal Town districts 82; in the Large Town districts 70; in the Small Town districts 64; in the Mainland-Rural 51; and in the Insular-Rural districts 41.

In estimating the fertility of marriages, which is done in accordance with the method proposed by the late Dr Farr, we find that during 1874 26390 couples entered into the matrimonial state in Scotland, and that during 1880 the registered legitimate births amounted to 113981, so that $\frac{113981}{26390}$ gives 4·32 as the average fertility of each marriage, or 432 children to 100 marriages.

In England a similar calculation gives 4·15 as the average number of births to each marriage, or 415 children to 100 marriages.

Upon Table Va is found the percentage of marriages to the population in each of the Eight Principal Towns of Scotland. Edinburgh stands highest with 0·877 per cent., or nearly 88 marriages in every ten thousand of population; Glasgow is next with 0·850 per cent.,

TABLE IX.—Proportion of Births in 1880. Percentage of Births to Population, and of Illegitimate to the Total Births; also the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; with the Proportion of Mothers who bare Twins and Triplets in Scotland, and its Five Groups of Districts in 1880.

FIVE GROUPS OF DISTRICTS.	Per-centage of Births to Population.	Per-centage of Illegit. to Total Births	Proportion of Males to every 100 Females in the			Proportion of MOTHERS who bare TWINS. — One in every	Proportion of MOTHERS who bare TRIPLETS. — One in every

religious ceremony. This is an increase upon those of like nature last year, but somewhat less than in 1878.

98·52 per cent. of all the marriages registered in Scotland were regular, and in the case of 11275 the ceremony was performed in accordance with the rites of the Established Church; 5287 in accordance with the rites of the Free Church; 2981 in accordance with the rites of the United Presbyterian Church; 2337 in accordance with the rites of the Roman Catholic Church; 700 in accordance with the rites of the Episcopal Church; 1529 according to the rites of other denominations; while in 33 cases the denominations under which the marriage took place were not mentioned; and there were 363 irregular marriages. In other words, the clergy of the Established Church performed 46·02 per cent. of the ceremonies; those of the Free Church, 21·58 per cent.; of the United Presbyterian Church, 12·17 per cent.; of the Romish Church, 9·53 per cent.; of the Episcopal Church, 2·85 per cent.; and of other denominations, 6·24 per cent.; while in 0·13 per cent. of the marriages, the denomination of the officiating clergyman was not stated. Table X.

Of the total 24505 marriages, the ages of the men at the time of the ceremony are ascertained in 24501 cases, and of these 1769 or 7·22 per cent. were minors, *i.e.* under 21 years of age. In the case of the females, the ages of 24499 were obtained at marriage, and of these 5393 or over 22 per cent. were then under 21 years of age. 31 men were at

the time of their marriage over 70 years of age, whilst among the females only three entered into this state at a like advanced period of life. Four men and six women do not state their age at marriage.

The favourite age for marriage among both sexes, and generally throughout Scotland, is between 20 and 25, as 38·92 per cent. of the men, and 46·13 per cent. of the females married between these years.

In the Insular-Rural districts, however, the largest proportion of the men marry between 25 and 30, for we find 35·33 per cent. of them doing so, as against 22·06 per cent. between 20 and 25.

In the Principal Town districts one girl was under 15 at her marriage: the youngest husband being a lad between 16 and 17, and in the same districts.

The condition of the contracting parties previous to marriage is as follows:—20848 marriages took place between bachelors and spinsters; 764 between bachelors and widows; 2122 between widowers and spinsters; and 750 between widowers and widows: in other words, 85·07 per cent. of the marriages were between bachelors and spinsters; 3·12

per cent. between bachelors and widows; 8·66 per cent. between widowers and spinsters; and 3·06 per cent. between widowers and widows.

Table XVIII. indicates in a somewhat crude manner the condition of elementary education among those who married in Scotland, and in its Groups, Divisions, and Counties during the year, inasmuch as we there find the percentage of men and women who at the date of their marriage signed the register by writing or simply by the adhibition of their mark.

There is an improvement this year on last, as 92·62 per cent. of the men signed their names in 1880, against 92·37 per cent. in 1879; and among the females 84·79 per cent. were able to do likewise in 1880, the proportion in the year previous being 84·69 per cent. 7·38 per cent. of the men adhibited their mark to the marriage document in 1880, as against 7·63 per cent. in 1879; 15·21 per cent. of the women doing the same, the percentage in 1879 among them being 15·31.

In Ross and Cromarty the schoolmaster was evidently most wanted, as only 77·69 per cent. of the bridegrooms could write, and 49·31 per cent. of the brides; and in Inverness, Dumbarton, Bute, and Lanarkshires over 10 per cent. of the former signed only by mark, whilst in 16 counties a like proportion of the fairer sex did the same.

Upon the two lower lines of Table XVIII., similar information is found as to Edinburgh and Glasgow. The former, as usual, has the advantage of the latter; but in Edinburgh during the present year 97·28 per cent. of the men signed by writing, while in 1879 there were 97·53 per cent. able to do so. In Glasgow there is, on the other hand, an

is 4·89 per cent.; whilst in 1879 it was 5·04 per cent.; but in Glasgow there is a falling back from 25·63 per cent. in 1879, to 26·13 per cent. in 1880.

DEATHS.

The number of deaths registered in all Scotland during the year 1880 was 75803, or 204·5 in every ten thousand of the estimated population. The mean death rate in Scotland for the last ten years was 217·9 in every ten thousand of its inhabitants; so that although the proportion is higher than in 1879, the death rate is still much below the average for the last decennial period.

In England we find from the Registrar-General's Forty-third Annual Report, the death rate in 1880 to be 205 per ten thousand persons living, "the lowest recorded since civil registration began, with one single exception, namely in the year 1877, when the death rate was only 203." The Scotch death rate that same year was 205·9 per ten thousand.

The average death rate in the Sister Kingdom during the last decennium (1870-1879) was 216 per ten thousand of its population.

On looking at the death rate in the five groups of districts into which we divide Scotland for statistical purposes, it is seen that in the Principal Town districts 28873 deaths were recorded, or at the rate of 242 per ten thousand of the inhabitants of the same; in the Large Town districts the deaths numbered 9840, or very nearly 224 per ten thousand of the inhabitants; in the Small Town districts the mortality was

TABLE XIX.—Deaths of Males and Females in Scotland, and its Five Groups of Districts, during each of the Years 1855-1880.

17482, in the proportion of 202 per ten thousand; in the Mainland-Rural districts they numbered 17557, or very nearly 163 per ten thousand; and in the Insular-Rural districts they were 2051, or 157 per ten thousand of the inhabitants, the proportion as usual steadily falling as the space at the disposal of the people residing there increases,—the greater the crowding the higher the mortality.

Tables XXI and XXII. afford like information as to the Principal Towns individually. In Glasgow the mortality for 1880 is at the rate of 2·61 per cent. of the estimated population; in Paisley it is 2·59 per cent.; in Dundee, 2·46 per cent.; in Greenock, 2·36 per cent.; in Leith, 2·30 per cent.; in Perth, 2·23 per cent.; in Edinburgh, 2·19 per cent.; and in Aberdeen, 2·00 per cent.

Of the total 75803 deaths in Scotland, 38055 are of males, and 37748 of females, and in accordance with our numbers upon Table II. it is found the proportion of male deaths to the estimated population per 1000 of its male inhabitants is 21·33, and of its female, 19·64. Table XX.

Aberdeen . . .	1927	1997	2119	2120	2066	2011	2033	2060	2204	2127	2078
Greenock . . .	1674	1772	1697	2220	1690	2180	1613	1563	1549	1597	1620
Paisley . . .	1352	1453	1430	1589	1388	1364	1287	1325	1591	1497	1424
Leith . . .	1059	1081	1338	1084	1254	1080	1174	1169	1215	1158	1378
Perth . . .	641	550	587	637	700	635	640	617	640	657	659

thus shows that in each of the five groups of districts the proportion of male deaths exceeds that of the female, most markedly in the Principal Town group, next in the Large Town group, then in the Insular-Rural districts, followed by the Small Town districts; the least difference being in the Mainland-Rural group of districts.

Table XXIV. affords information as to the percentage of deaths to the estimated population at various periods of life among males and females in Scotland, and in each of its five registration groups. For Scotland as a whole the percentage of male deaths under one year of age is 15.157, and of female, 12.654. The highest mortality is in the Principal Town districts, where at this early age males perished at the rate of 18.389 per cent.; females at that of 15.308 per cent.; the lowest being in the Insular-Rural districts, where the males died at the ratio of 9.633 per cent., the females at 8.079 per cent. The three remaining districts are intermediate, and their death rate apparently in accordance with the density of the population residing in them.

Under two years of age the percentage of male deaths in Scotland

is 7·009, and of female, 6·850. In the Principal Town districts this is most exceeded, the male deaths here being 10·277 per cent., and the female, 10·057 per cent. In the Small Town and Insular-Rural districts the female exceed the male exits.

During the third year of life, while the percentage of male deaths in Scotland was 2·944, and of females 3·063, in the Principal Town districts it was 4·756 of males, and 4·615 of females. In the Small Town and Mainland-Rural districts as in all Scotland the proportion of female deaths exceeds that of the male.

During the fourth year, the female mortality is again in excess of that of the male over Scotland generally, and especially in the Large Town, Small Town, and Mainland-Rural districts. In the Principal Town and Insular-Rural districts, on the other hand, a somewhat higher ratio of mortality is exhibited among the males than among the females.

In the fifth year of life the percentage of female mortality again slightly preponderates over the male throughout Scotland as a whole, and individually in the Principal Town and Small Town districts; the reverse occurring in the Large Town, Mainland-Rural, and Insular-Rural districts.

Between 5 and 10 years of age there was not a marked difference between the male and female mortality, and in all but the Mainland-Rural districts the proportion of the former exceeded that of the latter. Between 10 and 15, the proportion of female deaths was to a slight extent in excess of that among the males in Scotland, and four of its five divisions. Between 15 and 20, the males again usurped the going over to the majority in greater proportion than the females, and that in all the districts. Between 20 and 80 the percentage of male deaths universally overtopped that of the female, with the exception of a slight excess of the latter in the Large Town districts between 20 and 30, and in the Mainland-Rural districts between 30 and 40. At ages over 80, greater changes occur, though the male mortality is still in excess of the female, but probably the number of deaths at the higher ages are not to be so strictly depended upon as those occurring at the earlier.

Table XXVII. affords like information as to the percentage of deaths to the population at different ages in the Eight Principal Towns, the males and females being included together. Under one year of age, the greatest proportion of deaths takes place in Dundee and Perth, where 20·58 and 19·27 per cent. respectively succumb; and it is lowest in Aberdeen, with 14·43 per cent. At all years below 5, Glasgow shows the highest proportionate mortality, 8·68 per cent.; followed by Dundee, with 8·43 per cent.; Aberdeen being lowest, with 5·02 per cent. At the

greater ages of 70 and above, the highest percentage of deaths occurs in Leith, Perth, and Greenock.

Upon Table XXV. interesting information may be obtained as to the ages at which deaths occur in Scotland and in its five registration groups of districts; thus at a glance we may notice the larger proportion of infantile mortality, and also among children beyond this stage, up to the age of 5 years.

In Scotland, of the total deaths no fewer than 22·63 per cent. of males, and 18·31 per cent. of females die during their first year of life, the mean being exceeded in the Principal Town, Large Town, and Small Town districts; below the mean being the Mainland and Insular-Rural districts; and during the first five years of life, the very large percentage of 40·01 of male, and 35·25 of female deaths is found to occur throughout Scotland generally, being highest in the Principal Town districts, viz., 46·14 per cent. of males, and 41·35 per cent. of females; and lowest in the Insular-Rural districts, where 23·16 per cent. of males, and 18·87 per cent. of females die yearly at these early ages.

At the other end of the scale of life a large proportion of the population, both male and female, apparently attain to greater ages in the more sparsely populated parts of the country, viz., the Mainland and Insular districts, than in the more crowded Town and City districts, as our table shows a larger proportion of the total deaths at ages of 70 and above to occur in the former than in the latter. Thus, of the females, who it is generally admitted are longer lived than the opposite sex, of every 100 who died in the Principal Town districts not more than 10·5 attained the age of 70, in the Large Town districts 15·4, in the Small Town districts 18·4; whilst in the Mainland-Rural 29·5, and in the Insular-Rural districts 37·6, in every 100 attained a like age.

CAUSES OF DEATH.

The number of deaths registered in all Scotland during the year 1880 was 75803, but in the case of 1156, or 1·5 per cent. of the total, the cause

In all Scotland the deaths from the Miasmatic order of the Zymotic class of diseases in 1880 numbered 13229, being at the rate of 352 for every hundred thousand of estimated population of the country, and 17·72 per cent. of all specified deaths registered during the year. The Principal Town districts have apparently suffered more heavily than any of the others, and in all there has been a greater proportion of mortality from diseases of this order than in 1879; this, at the same time, to a slightly greater extent in the Insular-Rural districts than in the Mainland-Rural, which is not the usual condition.

Table XXXIII. shows the percentage of the deaths from the Zymotics and other diseases grouped at various ages; thus from 0 to 5 years 31·37 per cent. of the total deaths at the same ages are due to the former; from 5 to 10 years 41·31 per cent. die of the same, and from 10 to 15 years 21·66 per cent. do likewise, after which the proportion falls off largely. This shows a considerable increase of mortality from such

* Among the deaths from Drowning in Dundee are included those of 47 males and 12 females, owing to the fall of the Tay Bridge.

diseases in 1880 over the same in 1879. Between 5 and 10 years is the age at which they are usually most fatal, children at those years running the greatest risk of infection while attending school, &c.

Table XXXII. exhibits the number and proportion of deaths from the chief Zymotic diseases, and from all other causes arranged so as to present the mortality due to each during 5 successive periods of life. Out of every 100 deaths from Zymotic diseases 64·1 occurred during the first 5 years of life; 74·9 during the first 10 years of life; between 10 and 15 years of age 3·0; between 15 and 60 they were 14·7; and at ages over 60 they were 7·4.

Whooping-cough stands at the head of the list as a cause of death, 2641 deaths being due to this disease; 93·8 per cent. of them occurring during the first five years of life, and 5·9 per cent. during the next quinquennial period. Scarlet Fever caused 2165 deaths, 62 per cent. of which were during the ages 0 to 5 years, 29 per cent. between 5 and 10 years. Diarrhœa accounted for 2136 deaths, of which 69·6 per cent. were during the first five years of life, the next greatest percentage being 19·6

at ages over 60. Fevers generally were fatal in 1667 cases, the period of greatest mortality from them being between 15 and 60 years of age, when 52 per cent. of them occurred. Of the Fevers, Typhoid caused by far the largest mortality, viz. 1338, of which 51·1 per cent. of the deaths took place between 15 and 60 years of age, and 17·4 per cent. between 5 and 10 years. Typhus caused 170 deaths, 72·9 per cent. of them at ages between 15 and 60. Simple Continued Fever caused 155 deaths, and Relapsing but 4. Measles accounted for 1427 deaths, 92·8 per cent. of them during the first five years of life, 5·5 per cent. between 5 and 10 years. Diphtheria caused 838 exits, 64·5 per cent. of them within the first five years of life, 24·2 per cent. during the next quinquennial period. Croup caused 801 deaths, 90 per cent. of them at ages under 5 years, 9·4 per cent. between 5 and 10 years. Erysipelas accounted for 363 deaths, 41·9 per cent. at ages under 5 years, 27·3 per cent. between 15 and 60 years, and 28·6 per cent. at ages over 60. Syphilis is the cause of 228 deaths, no less than 86 per cent. of them being apparently congenital, as that proportion of deaths from the disease occurred during the first five years of life, and 12·3 per cent. were between ages 15 and 60.

As regards the five registration groups into which Scotland is divided, we find that diseases of this same order, Zymotic, proved fatal in varying proportions; thus, in the Principal Town districts, which suffered most, 473 out of every hundred thousand of their population perished from one or other of them; in the Small Town districts the fatality was 382 per hundred thousand; in the Large Town districts 380 per hundred thousand; in the Insular-Rural 235, and the Mainland-Rural districts 231 per hundred thousand of the population,—the rate for the whole of

Scotland, as before mentioned, being 362 per hundred thousand of its estimated population of both sexes.

Tables XXX. and XXXI. afford information regarding the mortality in the eight Principal Towns of Scotland as caused by various diseases, and we particularly note how the chief Miasmatics are here manifested.

In Leith the deaths from diseases of this nature were at the rate of 630 per hundred thousand of its inhabitants, no less than 253 of these being due to Scarlet Fever. Measles comes next with 99 deaths, and Hooping-cough follows with 87; Diarrhoea and Fevers bringing up the rear.

In Glasgow the proportion of deaths from Miasmatics is 541 per hundred thousand of its population, of these 145 being due to Hooping-cough, 92 to Scarlet Fever, 65 to Measles, 75 to Diarrhoea, and 66 to Fevers.

In Edinburgh the deaths from the same class of diseases is at the rate of 489 per hundred thousand of its inhabitants, Scarlet Fever being the most fatal, causing 156 in like proportion, Hooping-cough 94, Measles 81, Diarrhoea 55, and Fevers 33.

In Dundee the proportion is 430 per hundred thousand of popula-

tion, Measles being responsible for 117, Hooping-cough for 83, Diarrhœa for 108, Scarlet Fever 23, and Fevers, as Typhoid, Typhus, &c., 35.

In Paisley the deaths from Miasmatics is at the rate of 416 in every hundred thousand of its inhabitants, 149 being referred to Hooping-cough, 60 to Diarrhœa, 46 to Typhoid Fever, and 44 to Measles.

In Perth the proportion is 348, Diarrhœa causing the heaviest mortality, viz., 198, and Typhoid Fever 71 deaths in every hundred thousand of the population of the city, the other Miasmatics causing but a small proportion of the deaths in comparison with what they do in the other towns.

In Greenock the corresponding mortality is 302, of which Hooping-cough is the cause of 75, Diarrhœa of 62, and Croup of 32 deaths per hundred thousand of its population.

In Aberdeen the mortality is at the rate of 250 in the like number of its inhabitants, Hooping-cough causing 67, Diarrhœa 57, Measles 18, Diphtheria 16, and Croup 14 deaths in every hundred thousand of its population.

Throughout Scotland 10 fatal cases of Small-pox occurred, in the persons of 5 males and 5 females. In Glasgow 2 females died from it, one male in Dundee, one male in Aberdeen, one male in Greenock, one male and 3 females in Arbroath, and one male in Renfrew. Of those one was an infant under 6 months, and one a child under 3 years of age. Tables XXXII., XXXIV., XXXV., and XXXVI. afford the information we are able to present regarding the deaths from this loathsome disease, and the progress of vaccination in Scotland in 1880.

Measles caused throughout the country 1427 deaths during the year,

at the rate of 39 deaths in every hundred thousand of its inhabitants, and of these 1324 occurred during the first five years of life. This disease was most fatal in the Principal Town districts, where 2·78 per cent. of all the deaths from specified causes are due to it.

Scarlet Fever caused 2165 deaths, or 59 in every hundred thousand of the population of Scotland, 1343 occurring during the first five years of life, and 628 during the next quinquennial period. It was most felt in the Small Town districts, where 3·86 per cent. and in the Principal Town districts, where 3·59 per cent. of all the deaths from specified causes were due to it. Diphtheria caused in Scotland 838 deaths, in the proportion of 23 for every hundred thousand of its inhabitants, being most fatal in the Mainland-Rural districts, where 1·56 per cent., and in the Large Town districts 1·09 per cent. of all the deaths from specified causes were due to it.

Croup caused 801 deaths in Scotland, or 22 per hundred thousand of its population, the Insular-Rural districts affording the highest percentage to the total deaths from specified causes in the case of this disease.

Hooping-cough in all Scotland was the cause of 2641 deaths, in the ratio of 72 in every hundred thousand of its population; and of these 2478 succumbed during the first five years of life. This disease was most felt in the Principal Town districts, where it is responsible for 4·60 per cent. of the total deaths from specified causes.

From Fevers, 1667 persons died in Scotland during 1880, at the rate of 46 in every hundred thousand of its population, and forming 2·23 per cent. of the total deaths from specified causes. To Typhus 170 deaths

are ascribed, and to Typhoid 1338, or 1·79 per cent. of all specified deaths. The latter was most felt in the Small Town districts, where 2·30 per cent., and in the Mainland-Rural districts, where 1·98 per cent. of all specified deaths were due to it. Diarrhoea caused 2136 deaths, or 59 per hundred thousand of the population of the whole country, being most fatal in the Town districts, where so many children succumb to this disease.

Cancer caused the death of 1873 persons, 683 being of the male, and 1190 of the female sex, and at the rate of 51 per every hundred thousand of the population; the highest percentage to the total deaths from specified causes being in the Mainland-Rural districts, where it was 3·07, and in the Small Town districts, where it was 2·75.

Dropsy is assigned to be the cause of death in 436 cases, 185 males and 251 females, in the proportion of 12 per hundred thousand of population, although it is perhaps more frequently a symptom accompanying a specific disease, as of Heart, Kidney, Liver, &c., than a disease *per se*.

From the Tubercular order of diseases there were registered 11989 deaths in Scotland, 5799 being males, and 6190 females, in the proportion of 329 deaths for every hundred thousand of the population; or, in other words, 16·0 per cent. of the total deaths from specified causes came under this heading. The mortality is greatest in the Principal Town districts where in every hundred thousand of the population 410 succumbed to the various disorders of a Tubercular nature; in the Large Town districts, it is 384, in the Small Town districts is 333, in the Mainland-Rural 226.

TABLE XXXVIII.—Monthly Deaths from Fever in the Eight Principal Towns of Scotland during the Ten Years 1871-1880; specifying those from Typhus and Enteric Fever.

MONTHS.	Total Fever Deaths.	Typhus.	Enteric.	MONTHS.	Total Fever Deaths.	Typhus.	Enteric.
January	752	310	315	July	542	201	278
February	653	230	302	August	528	173	298
March	707	259	328	September	586	163	367
April	661	261	312	October	717	198	439
May	697	257	356	November	712	241	391
June	595	207	317	December	731	239	408

and in the Insular-Rural districts the ratio of deaths is 204 per hundred thousand of their population.

Consumption stands at the head of this order of disease, the deaths from it amounting to 8074, or 221 in every hundred thousand of population; the males numbered 3677, and the females 4397.

Phthisis as a cause of death is found to be greatest in the Principal Town districts, where 1082 succumbed to it, or 271 in every hundred thousand of the inhabitants.

In Paisley the proportion of deaths from Phthisis is higher than in any of the other Eight Towns, viz., 323 per hundred thousand of population; in Glasgow it is 318; in Greenock, 289; in Perth, 269; in Dundee, 245; in Aberdeen, 229; in Leith, 213; and in Edinburgh, 200 per hundred thousand.

Hydrocephalus caused 1900 deaths in Scotland, 1029 males and 871 females, being at the rate of 52 per hundred thousand of its population. Their percentage is highest in the Large Town districts, where 2.99 per cent. of the total deaths from specified causes in these districts fall under this heading.

It is apparent, on looking at Tables XXVIII. and XXIX., that all the classes of the Tubercular order of disease are more prevalent the denser the population, and therefore with less air and light, &c., available for each person.

To Diseases of the Brain and Nervous System 7701 deaths are ascribed, in the proportion of 211 in every hundred thousand of the population; in other words, 10.31 per cent. of all deaths due to specified causes are of this nature, 4015 being males, and 3686 females. Apoplexy and Paralysis cause the largest mortality; from the former, 2006 are

TABLE XXXIX.—The Twenty most fatal Diseases in Scotland and England in 1880, arranged in the order of their fatality.

returned as having died, or 55 per hundred thousand, 1031 being males, and 975 females; and from the latter, 2048, or 56 per hundred thousand, 998 being of the male, and 1050 of the female sex; and it is in the Large Town, and Principal Town districts they bulk most largely. Among the Principal Towns, Paisley apparently suffers most in proportion to its population from diseases of this class, the deaths being in the ratio of 306 per hundred thousand. Perth comes next, with 293 deaths, and Edinburgh least, with 215 in like proportion.

To Diseases of the Circulatory System—Heart and Blood-vessels—4779 deaths are due, *i.e.*, 131 in every hundred thousand of the inhabitants, or 6.40 per cent. of all deaths from specified causes; 2402 are males and 2377 females.

From Heart Disease 4514 deaths occurred in the persons of 2225 males and 2289 females. It is in the Principal Towns that diseases of this nature are fatal in the highest proportion; thus in Perth they are in the ratio of 177 per hundred thousand of population; next in Edinburgh, 176; next in Dundee, 144; and least in Paisley, with 104 in like proportion.

From Diseases of the Respiratory System other than those included under Consumption, Croup, Diphtheria, &c., there were 13824 deaths, males 7277, females 6547, at the rate of 379 per hundred thousand of population, or 18.52 per cent. of deaths from specified causes were due to them. Bronchitis and Pneumonia are responsible for a great proportion of this mortality, no fewer than 8562 deaths being due to the former, or 234 per hundred thousand of population, and to the latter, 3203 deaths are ascribed, or 88 in similar proportion. In both cases the preponderance of them is in the Principal Town districts.

From Diseases of the Organs of Digestion 4335 persons succumbed, at the rate of 119 in every hundred thousand of population, or 5.80 per cent. of all deaths from specified causes; of these 2130 were males, and 2205 females.

From Enteritis 876 deaths occurred; from Hernia 133 deaths, 11 of these during the first three years of life, and 65 at ages over 60, and of those 29 were males, and 36 females.

From Liver Diseases, inclusive of Hepatitis and Jaundice, 1173 deaths took place, 567 being males, and 606 females.

To Diseases of the Urinary Organs 1603 deaths are ascribed, *i.e.*, 44 in every hundred thousand population, or 2.15 per cent. of the deaths from specified causes, 1025 being males and 578 females. Of these 491 were due to Bright's Disease, 168 to Cystitis, and 34 to Vesical Calculi in the person of 28 males and 6 females.

From Diseases of the Organs of Generation the deaths of 8 males and 184 females are registered, 82 of the latter being from Ovarian Dropsy, and 102 from Disease of the Uterus.

From Puerperal Causes 620 females died, 185 being from Puerperal Fever, 19 from Paramenia, and 416 from other direct effects of Child-birth.

From Diseases of the Organs of Locomotion—Bones and Joints—chiefly the latter, 237 males and 153 females died; and Diseases of the Skin and parts connected therewith are accountable for the deaths of 132 males and 136 females.

Under deaths from Premature Births are 890 males and 742 females, together 1632; and Teething was the ascribed cause of death in 691 cases, 370 male and 321 female children; while to Spina Bifida, Cyanosis, and other Malformations, 147 males and 138 females succumbed.

From Old Age 1818 males and 2977 females died, in the proportion of 131 in every hundred thousand of the population. Of these, 24 men are between 95 and 100, and 7 over 100 years of age; and of the females 76, and 19 are returned as having died at like advanced ages. One of the men, a crofter in Caithness, is said to have been 114 years old at death. Of the females 10 are over 100 years of age, and one, a widow, is reported of no less an age than 120 years at the time of her demise.

From Violence, in one form or other, there suffered 1885 males and 652 females, together 2537, or 3·40 per cent. of all deaths from specified causes were due to them. Fracture and Contusion was the cause in the case of 751 males and 175 females; Burns and Scalds in 148 males and 140 females; Drowning in 631 cases, 530 being males and 101 females (of these 46 were cases of Suicide); 135 males and 116 females were accidentally suffocated. Among the cases of Drowning, are included those of 47 males and 12 females, who met their death by being in the train which was crossing the Tay Bridge when it fell, on the night of the 28th December 1879.

There were 9 cases of Murder or Homicide.

Suicide was resorted to by 115 males and 55 females, as follows:—by Hanging, 50 males and 15 females; by Gunshot, 2 males; by Stabbing and Cut-throat, 29 males and 4 females; by Drowning, 24 males and 22 females; by Poison, 6 males and 9 females; (2 males and 1 female taking Laudanum, 1 male and 1 female Carbolic Acid, 1 female Arsenic, 2 females Aconite, 2 females Phosphorus, while in the case of 3 males and 2 females the poison preferred was not stated). 2 females committed Suicide by precipitation, *e.g.*, before railway train; while in the case of 4 men and 3 females the special method by which each made away with him or herself is not specifically given.

There was no Execution in Scotland for the purposes of justice during 1880.

In 1156 cases the causes of death were not specified, or in so ill-defined a manner that they could not be made use of for statistical purposes.

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1880, compared with the Mean of the Ten Years 1855–1864.

YEAR 1880.					1855–1864.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

It is now an accepted fact, often enough proved, that the health of a people is much affected by the climatic changes which take place among them; and this is constantly presented to the notice of those who are wont to regard those changes which occur hourly, daily, weekly, and monthly, and compare with them the Sick and Death rate of corresponding periods and communities.

Among the old and young, in other words, in the case of the feeble and those who are consequently not able to take proper care of themselves from want of strength or want of knowledge, as is the case at either end of the span of life, we find with any considerable fall of atmospheric temperature, many struck down by the more acute pulmonary affections, and to this category may be added those suffering from long-standing organic diseases, especially of the Heart, Kidneys, and Lungs. The prevalence or not of Miasmatics is also to a considerable degree dependent upon the season of the year, and therefore upon climatic conditions.

On looking to the end of the previous year, it is to be remembered that December of 1879 was a cold month, its mean temperature being $34^{\circ}7$; the thermometer in Edinburgh upon one day registering $7^{\circ}5$, or $24^{\circ}5$ below freezing point; and towards the end of the month the weather became very windy, but mild. The daily deaths were 241.

TABLE XLI.—Meteorology of Scotland for 1880, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also, the Number of Births, Deaths, and Marriages registered during each Month of the Year 1880, as stated in the Quarterly Reports.

For a brief notice of the Meteorology, &c., of the various months of the year, we refer to our Annual Report for 1880.

January was remarkable for extremely high barometric pressure and little rain. The mean temperature was 36°·8. The month both began and ended with mild weather. Prevailing winds were W.S.W. The daily deaths were 224.

February was remarkable for its high temperature, generally low barometric pressure, unusually strong W.N.W. winds, and generally normal rainfall. The mean temperature was 41°·7. The daily deaths amounted to 223.

March was on the whole an average month in its meteorological features. The prevailing wind was easterly; the barometric pressure was high; the mean temperature was 41°·2. The daily deaths 236.

April 1880 was a favourable example of that month; the mean temperature 44°·7, having been 0·5 above the average of former years, and 4·3 above that of April 1879. There was an abundant rainfall, and the strength of the winds (E.N.E. and W.S.W.) not excessive. The daily deaths were 233.

May was bright, dry, and breezy; the wind nearly equally divided between east and west; the mean temperature 49°, rather above the average of former years; considerable daily variations of temperature indicating an open sky; little humidity of the air, rather scanty rainfall; but strength of wind considerable, and barometric pressure high. The daily deaths were 215.

June was chiefly characterised by the prevalence of east winds, with consequent lowering of the mean temperature, which was only 54°·9. There was a decrease of rainfall; the barometric column stood at its usual height. The daily deaths were 202.

July was characterised by a frequency of east wind, accompanied with extra rainfall; and a mean temperature $56^{\circ}7$, which was 0.7 below the average of former years. The daily deaths were 184.

August was characterised by high barometric pressure, little rain, little wind, and remarkably high mean temperature amounting to 59.4 . The general direction of the wind was E.S.E. The daily deaths were 186.

September, like the month immediately preceding it, had the same meteorological characteristics. The mean temperature was $55^{\circ}2$. The daily deaths were 186.

October was dry, cold, with a mean temperature of $52^{\circ}4$; high barometric pressure; only half the usual rainfall; preponderance of N. and E. winds; and daily deaths amounting to 182.

November was cold, wet, and stormy, with the wind generally from the W.N.W. The mean temperature was $38^{\circ}5$, and the daily deaths were 217.

December was on the whole an average specimen of that month. Its mean temperature was $36^{\circ}6$; the barometric pressure was rather low, the rainfall rather scanty, strength of wind considerable, and, upon the whole, preponderance of W. winds. The daily deaths were 197.

Tables XL. and XLI. afford information as to the meteorological changes during the successive months of 1880, and with them we have presented the more prominent points respecting the mean monthly temperature and the monthly mortality in Scotland during the same period. Thus we find January and December to be the two coldest months, $36^{\circ}8$ and $36^{\circ}6$ being their respective mean temperatures. February and March had improved, the mean temperature of the former being $41^{\circ}7$, and of the latter $41^{\circ}2$.

The warmest month was August, July being next. As usual, we

find the columns showing the death-rate to be affected more or less in accordance with the variations in temperature.

From Table XLII. some information may be obtained in the case of the Eight Principal Towns, as to the effects of temperature and other meteorological phenomena upon the death-rate from various diseases, and during each month of the year.

Bearing in mind that the weather of December 1879 was severe, the mean temperature being $34^{\circ}7$, we are prepared to expect a high rate of mortality in January 1880, when the total deaths amounted to 2594, a daily average of 84. In March, April, and May the deaths were even more numerous than in January, after which they fell off until November, when with the advent of cold weather there was a considerable rise.

We find that 5 cases of Small-pox occurred in these towns, 2 in March, 2 in July, and 1 in December.

Measles was most fatal in April, but in March and May the mortality from it was also high, January showing the minimum. Scarlet Fever caused most deaths during November, but in September, October, and December they bulked largely; in March and April they were fewest. Diphtheria and Croup were most fatal in September and October. Deaths from Hooping-cough attained their maximum in April and May, and were also numerous during the first three months of the year; their minimum being in November.

Deaths from all Fevers were most numerous in May, least so in February. Diarrhoea, as usual, is found to be most fatal and prevalent during the autumnal months August and September, while December and January are those in which they are fewest.

Consumption presents a heavy roll for each month, May, April, and June showing the largest number of deaths. September the fewest, but even then 201.

The various diseases of the Respiratory Organs are especially prone to be affected by changes of temperature and weather, in fact they are quite like a barometer. In January they bulk largest, the month

TABLE XLIV.—Monthly Mortality at Four Periods of Life in the Eight Principal Towns of Scotland during the Year 1880, and Proportion at each Age in every Hundred Deaths per Month.

YEAR . . .	12,628	3,281	8,064	4,870	28,843	43.7	11.4	28.0	16.9	100

following a very cold one, inasmuch as it is usual for a little time to elapse between the action of the inclemency of the weather, &c., upon the system of the sufferers and the occurrence of its fatal effect. February, March, November, and December are also heavily burdened with deaths from these causes; August and September have the lightest roll.

From Heart Disease, and for much the same reason as in the case of the Lungs, the greatest mortality is seen to be in November, December, and January; the least in the milder months of September and August.

On Tables XLIV. and XLV. is presented the monthly mortality at four periods of life, as experienced in the Eight Principal Towns of Scotland during the year: in the latter table the months are equalised to a uniform length of 31 days for better comparison sake.

In the case of children under the age of 5 years the greatest mortality occurred during the months of March and April, those months when several of the so-called children's diseases, as also affections of the Respiratory Organs, *e.g.*, Bronchitis, were most rife. The minimum of deaths at this early age were during July. Adolescents, or those between the ages of 5 and 20 years, died in greatest number during May, June, and November; and on referring to Table XLII., it is seen that in the two former months, Phthisis was most fatal, whilst in November Lung diseases of a more acute nature come to the front as a frequent cause of death. February and January are apparently the months in which the smallest number of adolescents die. Adults, including those between 20 and 60, died in largest numbers during January, March, May, and November; the fewest deaths among them being during September. At these ages, 20 to 60, no fewer than 8064 deaths occurred in the Eight Towns, to be partly accounted for by remembering that it is during these years, in the case of the male sex at least, that most exposure to vicissitudes of temperature and climate occurs, as also to accidents, inasmuch as men are then in the heyday of manhood, and as heads of families most able and wishful to work.

Aged persons, or those over 60 years, died in greatest number during

TABLE XLV.—Months equalized to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in the Eight Principal Towns during each Month of the Year 1880.

YEAR	12,841	3,338	8,195	4,952	29,321	12,000

November, March, February, and January, those months when the highest mortality occurred from Diseases of Heart and Brain, which so often cut off the old. The smallest mortality among those at advanced years was in September and August.

Among the whole inhabitants of the Eight Principal Towns in Scotland, the deaths during each month ranked as follows in order of frequency:—March, April, November, May, January, February, December, June, October, July, August, September.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, 16th January, 1884.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 3000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.

N.B.—An asterisk "*" is prefixed to those Districts which comprise one or more Parishes or parts of Parishes, and the component parts of these Districts will be found at page 341.

A dagger "+" is prefixed to those Districts which consist of only a part of the Parish of the same name.

* The actual number of Districts is 1085—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

REPORT.

TO THE RIGHT HON.

SIR WILLIAM VERNON HARCOURT, Q.C. M.P.,

Her Majesty's Principal Secretary of State for the Home Department.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 14th March 1884.

SIR,

In accordance with the requirements of the Scottish Registration Act (17 and 18 Vict. cap. 80), I have now the honour to submit to you a General Abstract of the Births, Deaths, and Marriages registered in Scotland during the year 1883, which has been drawn up in the usual form, with a view to its being laid before Parliament.

I have likewise the honour to submit to you, in accordance with Section 19 of the Vaccination Act (26 & 27 Vict. cap. 108), the Nineteenth Annual Report on Vaccination, embracing the usual details relative to children whose Births were registered in Scotland during the year 1882.

Only six deaths from Small-pox were recorded in the Registers of Eight of the Principal Towns of Scotland during the year under review.

I have the honour to be,

SIR,

Your most obedient Servant,

STAIR AGNEW,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL

BY R. J. BLAIR CUNYNGHAME, M.D., F.R.S.E.

SIR,

The following Report is designed to afford information regarding the Births, Deaths, and Marriages registered in the various Registration Districts of Scotland during 1883. As an Appendix to the General Annual Report, is the Nineteenth Report on Vaccination, containing all available particulars regarding the administration of the Scottish Vaccination Act, especially with reference to the vaccination of children born in Scotland during 1882.

At the middle of the year, under consideration, 1883, the estimated population of Scotland was 3,825,744, of these 1,846,864 being males and 1,978,880 females. During the year there were registered 124,462 births, 76,867 deaths and 26,855 marriages; hence, for every hundred of estimated population there were 3·25 births, 2·01 deaths, and 0·70 marriages. On comparing these figures with similar on Tables I. and II.,

TABLE I.—Population estimated to the middle of each year, with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1883, and their Proportion to the Population; also the Excess of Births over Deaths, the Number of Illegitimate Births, and their Proportion to the Total Births.

YEAR.	Estimated Population.	BIRTHS.		DEATHS.	MARRIAGES.	Excess of Births over Deaths.	Percentage to Population.			Per cent. of Illeg. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.	
1855	2,978,065	93,349	7,357	62,004	19,680	31,345	3·1491	2·0620	0·6606	7·8
1856	2,995,771	101,821	8,695	58,529	20,740	43,292	3·3968	1·9537	0·6923	8·5

which afford similar data for previous years, it is seen that the proportion of each of the three events is below the average for the preceding ten years, but in the case of the deaths is greater than during the two years immediately preceding.

The excess of births over deaths during the year is 47,595.

BIRTHS.

124,462 births were registered throughout Scotland during 1883, being at the rate of 3·25 per cent., or 325 for every hundred thousand of estimated population; 63,890 of these were males, and 60,572 females. Tables IV. and V. afford information as to the number and proportion of births in the five groups of Registration districts into which Scotland is divided. In the Principal Town districts, the registered births amounted to 52,143; in the Large Town districts to 13,902; in the Small Town districts to 26,162; in the Mainland-Rural districts to 29,123; and in the Insular-Rural districts to 3132. On this occasion these numbers relating to the five groups of districts cannot be well compared with those of previous years, inasmuch, as upon the completion of the Census 1881, it was found necessary to make considerable changes among them, owing to increase in the population of some of the Towns and decrease in others, requiring their removal from one set of districts into another. On Tables IV*a*. and V*a*., however, we present for comparison sake the figures for 1882, representing the arrangement of the districts in that year corresponding to those in Tables IV. and V. for 1883.

As in former Reports the Principal Town districts are composed of Towns whose population numbers 25,000 and over. Large Town districts those whose populations are between 10,000 and 25,000; the Small Town groups comprises these Towns with populations from 2,000 to 10,000; while in the Mainland-Rural districts we include all the remaining Rural districts on the Mainland, and in the Insular-Rural those on the Islands.

The number of illegitimate births amounted to 10,035, or 8·06 per cent. of the total births come under this heading, the lowest proportion since the year 1855. They occur in the largest proportion in the Mainland-Rural districts, 9·9 per cent.; whilst in the Principal Town and Small Town districts they form 7·7 per cent. of the total births; in the Large Town 6·8 per cent.; being lowest in the Insular-Rural districts where they constitute 5·4 per cent. of all the births.

The relative frequency of illegitimacy in the various Geographical

TABLE III.—Births, Deaths, and Marriages in each of the Eight Divisions of Scotland during the Year 1883, and their Proportion to the Estimated Population.

DIVISIONS.	Population estimated to middle of 1883.	BIRTHS.		DEATHS.		MARRIAGES.	
		Number.	Per cent. to Pop.	Number.	Per cent. to Pop.	Number.	Per cent. to Pop.
Northern . .	123,278	2,918	2·37	1,884	1·53	533	0·43
North-Western .	165,754	4,130	2·49	2,384	1·77	748	0·45
North-Eastern .	423,875	13,330	3·14	6,793	1·60	2,644	0·62
East-Midland . .	612,207	17,956	2·93	11,960	1·95	4,049	0·66
West-Midland . .	291,080	9,071	3·12	5,279	1·81	1,606	0·55
South-Western .	1,434,933	53,675	3·74	33,906	2·36	12,097	0·84
South-Eastern .	563,806	17,364	3·06	10,352	1·84	4,069	0·72
Southern . .	210,811	6,018	2·85	3,759	1·78	1,109	0·53

divisions and counties of Scotland, is tabulated in Table VI. As usual, it is seen that the North-Eastern and Southern divisions stand highest in furnishing the greatest proportion of illegitimate births, the North Western and West Midland affording the lowest. Among the counties, Shetland, Ross and Cromarty and Dumbarton, present but 4·5 per cent. of such; in ten counties the rate of illegitimacy was under 7 per cent.; in Elgin, Banff, Dumfries, and Kirkcudbright, it was between 14 and 15 per cent.; while in Wigtown it reached the prominent position of 17·8 per cent.

Of the total, 124,462 births in Scotland, 63,890 were male, and 60,572 female, hence the proportion of boys to girls was as 105·5 to 100. This was most marked in the Insular-Rural and Mainland-Rural districts, where the proportion was 108·8 and 107·3 respectively; whilst in the Large Town districts it was but 102·7 to 100.

Births were most numerous in May, during which month 359 per diem were registered; least numerous in September, when 309 were registered daily, in November there were 323, in August 327, in December 330, in March 343, in February 344, in October and in July 345, in June

DEATHS.

76,867 deaths were registered in Scotland during 1883, being in the proportion of 201 to every ten thousand of estimated population, slightly within that of the average for the last ten years, but an increase over the rate during the last two years.

The highest mortality occurred in the Principal Town districts, where it was at the rate of 241 per ten thousand of estimated population; in the Large Town districts, the death rate was 204 per ten thousand; in the Small Town districts it was 187; in the Mainland-Rural districts 158; and in the Insular-Rural districts it stands at 161 in every ten thousand of the estimated population in the same.

The average number of deaths was greatest during March, when 246 per diem were registered, whilst in September there were but 169 registered daily. In August the daily mortality amounted to 180, in October to 183, in July to 191, in November and December to 201, in June to 210, in May to 225, in April to 237, in February to 243, and in January to 245. The average number of deaths registered day by day was 211.

MARRIAGES.

During 1883 the number of marriages registered in Scotland, amounted to 26855, which is at the rate of 70 for every ten thousand of estimated population (701 per hundred thousand). This, although slightly below that for last year, (702 per hundred thousand) is above the rate in any year since 1877, when very nearly 72 marriages took place for every ten thousand of the inhabitants.

In the Principal Town districts, the marriage rate for 1883 was 90 per ten thousand of their inhabitants; in the Large Town districts 71 per ten thousand; in the Small Town districts 63; in the Mainland-Rural districts 51; and in the Insular-Rural districts it was 40 per ten thousand.

The largest number of marriages was registered during June, when they were at the rate of 124 per diem; the smallest during May when the rate was only 36 each day, increasing as follows, during the other months, in August 47, in March 49, in February 51, in September 54, in October 56, in April 66, in November 80, in July 90, in December 112, and in January 114.

EIGHT OF THE PRINCIPAL TOWNS OF SCOTLAND.

The materials furnished monthly by the Registrars of Glasgow, Edinburgh, Dundee, Aberdeen, Greenock, Leith, Paisley, and Perth, form the basis upon which the following sections of this Report are founded, and as the numbers enumerated at the late Census show that some 32 per cent. of the inhabitants of Scotland reside in these Towns, we may justly consider the facts obtained regarding their circumstances may fairly represent that of the inhabitants of the country at large,

BIRTHS IN THESE EIGHT TOWNS.

43,329 births were registered in the afore-mentioned eight Towns during 1883, being at the rate of 356 for every ten thousand of their estimated population. The highest birth-rate was that of Greenock, the lowest that of Perth. According to Table VIII. we see the births per ten thousand of population to be 398 in Greenock, 385 in Glasgow, 374 in Aberdeen, 367 in Paisley, 353 in Leith, 328 in Dundee, 298 in Edinburgh, and 275 in Perth.

Of the 43,329 registered births in these Towns, 3567, or 8·22 per cent. were illegitimate. In Dundee 10·8 per cent. of the total births were illegitimate; in Aberdeen 9·7 per cent.; in Edinburgh 8·7 per cent.; in Perth 8·6 per cent.; in Glasgow 8·2 per cent.; in Paisley 6·3 per cent.; in Greenock 5·1 per cent.; and in Leith 4·6 per cent. In the Seventh Column of Table VIII., we find the percentage of births to possible mothers in each town to be as follows. In Glasgow there were 2·39 illegitimate births to every hundred unmarried women and widows between 15 and 45 years of age; in Aberdeen 2·28; in Dundee 2·11; in Greenock 2·03; in Perth 1·62; in Leith 1·53; in Paisley 1·52; and in Edinburgh 1·51.

Of the total births in these Towns, 22,258 were males, and 21,071 females; the proportion of boys to girls was accordingly as 105·6 to 100.

DEATHS IN THESE EIGHT TOWNS.

The number of deaths registered in these Towns during 1883 was 29,794, of which 14,910 were males, and 14,884 females; being in the proportion of 242 to every ten thousand of estimated population.

From Table VIII. we find that in Aberdeen and Perth 191 deaths occurred for every ten thousand of their inhabitants; in Edinburgh 192; in Leith 203; in Dundee 239; in Paisley 242; in Greenock 250; and in Glasgow 282.

Table X. affords some information concerning the infantile mortality in these same Towns, viz., the proportion of children under 5 years of age who died during the year to the estimated number of children in each town at the same age; and also the percentage of deaths among them to the total deaths among their inhabitants at all ages. Thus, we find that in Glasgow 92 out of every thousand children died during the first five years of life; in Greenock 78; in Dundee 72; in Paisley 63; in Leith 58; in Edinburgh 54; in Aberdeen 46; and in Perth but 40. On the other hand, in Greenock the percentage of deaths at ages under five years to the deaths at all ages was 46·4 in Glasgow, 44·6 in Leith, 43·2 in Dundee, 40·7 in Paisley, 35·5 in Edinburgh, 34·7 in Aberdeen, 33·5, and in Perth 26·2.

Table XI. indicates the percentage of deaths from each class of disease, and from the principal diseases to the estimated population of each of the towns; and Table XII. shows the percentage of the same deaths to the total deaths from all causes in them, allowance being made for the causes of death which are not specified.

From Miasmatic diseases there died in the Eight Towns 0·429 per

cent. of their populations, which is equal to 17·77 per cent. of the total deaths that occurred in them. Diseases of this nature bulked most largely in Glasgow where 0·596 per cent. of its inhabitants succumbed to one or other of them; in Greenock 0·383 per cent. died from them; in Dundee 0·381 per cent.; in Leith 0·339 per cent.; in Paisley 0·327 per cent.;

TABLE VIII.—Births, Deaths, and Marriages, and their Proportion to the Population, during the Year 1883, in each of the following Principal Towns of Scotland; Estimated Number of Unmarried Women and Widows between 15 and 45 years of age; also the Illegitimate Births, and their Proportion to the Total Births, and to the Number of possible Mothers.

TOWNS.	Population estimated to the middle of 1883.	BIRTHS.		Unmarried Women and Widows between 15 and 45.	ILLEGIT. BIRTHS.			DEATHS.		MARRIAGES.	
		Number.	Per cent. to Pop.		Number.	Per cent. to Total Births.	Percentage to Possible Mothers.	Number.	Per cent. to Pop.	Number.	Per cent. to Pop.
Glasgow	515,589	19,869	3·85	68,037	1629	8·2	2·39	14,562	2·82	5195	1·01
Edinburgh	235,946	6,844	2·90	39,670	598	8·7	1·51	4,841	1·92	1976	0·84
Dundee	147,766	4,849	3·28	24,870	525	10·8	2·11	3,629	2·39	1323	0·90
Aberdeen	109,237	3,678	3·74	15,683	358	9·7	2·28	2,082	1·91	867	0·79
Greenock	71,515	2,845	3·98	7,904	146	5·1	2·03	1,785	2·50	561	0·78
Leith	65,065	2,298	3·53	6,925	106	4·6	1·53	1,321	2·03	573	0·79
Paisley	57,413	2,106	3·67	8,774	133	6·3	1·52	1,390	2·42	590	1·03
Perth	30,556	840	2·75	4,452	72	8·6	1·62	584	1·91	221	0·72

in Edinburgh 0·284 per cent.; in Aberdeen 0·218 per cent.; and in Perth 0·184 per cent. The percentage of the total deaths due to these causes was 24·32 in Leith, 21·12 in Glasgow, 15·79 in Dundee, 15·35 in Greenock, 14·76 in Edinburgh, 13·53 in Paisley, 11·94 in Aberdeen, and 9·54 in Perth.

In Glasgow, of every hundred deaths 5·97 were attributed to Hooping-cough, 4·51 to Measles, 3·06 to Scarlet Fever, 2·66 to Diarrhœa and Dysentery combined, and 1·69 to Fevers generally, of which 1·22 were to Enteric and 0·37 to Typhus.

In Edinburgh, the percentage of deaths from Measles was 2·94, from Hooping-cough 2·45, from Scarlet Fever 1·99, from Diarrhœa and Dysentery 2·10, and from all Fevers 1·39, of which Typhoid constituted 0·97.

In Dundee, the percentage of deaths from Hooping-cough was 7·83, that of Diarrhœa and Dysentery 3·04, and of Fevers 1·05, Typhoid being responsible for 0·68, and Typhus for 0·28. The other Miasmatics were inconsiderable in number except Diphtheria, which caused 1·65 per cent. of the deaths.

In Aberdeen, the percentage of deaths from Hooping-cough was 3·20, from Croup 1·65, from Diphtheria 1·41, from Diarrhœa 2·77, and from all Fevers 1·36, whereof 0·78 were Enteric and 0·44 Typhus.

In Greenock, in every hundred deaths 3·51 were from Measles, 3·28 from Hooping-cough, 2·95 from Diarrhœa and Dysentery combined, 1·25 from Fevers in general including deaths from Typhus and Typhoid in equal proportions, 1·47 from Diphtheria, and 1·02 from Croup.

TABLE IX.—Percentage of Deaths to the Population in each of the Eight Principal Towns of Scotland during each of the Years 1873–1883.

TOWNS.	Percentage of Deaths to the Population.

TABLE X.—Deaths of Children under Five Years of age in each of the Eight Principal Towns of Scotland during the Year 1883.

TOWNS.	Estimated Number of Living Children under 5 years in 1883.	Deaths under 5 years of age.	Percentage of Deaths under 5 years.	Percentage of Deaths under 5 years to the Total Deaths.
Glasgow	70,633	6,496	9·20	44·6
Edinburgh	28,942	1,677	5·45	34·7
Dundee	19,736	1,436	7·28	40·7
Aberdeen	15,026	697	4·64	33·5
Greenock	10,605	825	7·81	46·4
Leith	9,788	571	5·83	43·2
Paisley	7,725	493	6·38	35·5
Perth	3,803	163	4·02	26·2

In Leith, the percentage of deaths from Hooping-cough was 5·62, from Measles 2·89, from Scarlet Fever 1·75, from Diarrhœa and Dysentery 2·43, and from Fevers 1·67 of which Typhoid was responsible for 1·06, and Typhus for 0·46.

In Paisley, the percentage of deaths from Hooping-cough was 3·11, from Scarlet Fever 1·52, from Measles 1·01, from Diarrhœa and Dysentery 2·10, Fevers causing but 0·72, of which Typhoid claims 0·65.

In Perth, in every hundred deaths, there were 4·30 from Hooping-cough, 2·23 from Diarrhœa, 1·38 from Fevers, all being due to Typhoid, the other Miasmatics being quite inconsiderable in number.

In the same Eight Towns, there were 1512 cases of Hooping-cough, being 5·12 per cent. of all the registered deaths, and 12·4 deaths in every ten thousand of their estimated population. Measles caused 908 deaths, or 3·07 per cent. of all deaths registered, and 7·4 deaths in every ten thousand of their inhabitants. Diarrhœa caused 735 deaths, at the rate of 2·49 per cent. of all deaths registered, and 6·0 deaths for every ten thousand of estimated population.

Scarlet Fever is the attributed cause of death in 607 cases, being

TABLE XI.—Percentage of Deaths from different Diseases to the Population in each of the following Eight Principal Towns of Scotland during the Year 1883, allowing for the Causes not specified.

2·05 per cent. of all deaths registered, and 5·0 in every ten thousand of population. The deaths from Fevers numbered 433, constituting 1·47 per cent. of the mortality from all causes, and 3·5 per ten thousand of population.

In Paisley and Perth, no cases of Typhus proved fatal, and in Greenock, the Typhus and Typhoid deaths equalled each other, whilst in the other five towns, the latter greatly exceeded the former in numbers. One death from Relapsing Fever occurred in Glasgow, and one in Aberdeen.

Diphtheria caused 343 deaths, or 1·16 per cent. of all causes, and 2·8 deaths in each ten thousand of population. Croup caused 298 deaths, or 1·01 per cent. of all causes, and 2·4 deaths per ten thousand of population. 116 deaths were attributed to Syphilis, 113 to Rheumatism, and 104 to Erysipelas. From Small-pox 6 deaths occurred, all in Glasgow, 1 in a child under five years of age, 1 at ages between 5 and 20 years, and 4 between 20 and 60 years. 1 occurred in April, 2 in November, and 3 in December. 650 deaths were registered under Cancer, the proportion of deaths from this cause being greater in Aberdeen, Leith,

TABLE XII.—Percentage of Deaths from different Diseases to the Total Deaths in each of the Eight Principal Towns of Scotland during the Year 1883, allowing for the Causes of Death not specified.

and Edinburgh, than in the other Towns, and least in Glasgow. 144 deaths were ascribed to Dropsy.

Diseases of a Tubercular nature caused 4766 deaths, being 16·13 per cent. of the total mortality, and 39·0 deaths in every ten thousand of estimated population. To Phthisis or Pulmonary Consumption, 3306 deaths are ascribed, being 10·19 per cent. of the mortality from all causes, and 27·0 deaths for every ten thousand inhabitants of the Eight Towns. Glasgow suffered most from this scourge, Perth least.

From Hydrocephalus, there were 713 deaths; from Tabes Mesenterica 507, and from Scrofula 240. Diseases of the Nervous System accounted for 3271 exits, being 11·07 per cent. of the total deaths, and 26·7 in every ten thousand of population. The percentage of deaths from diseases of this class, to deaths from all causes was 14·46 in Perth, 14·25 in Paisley, 13·79 in Aberdeen, 13·61 in Dundee, 11·21 in Greenock, 10·76 in Edinburgh, 9·95 in Leith, and 9·81 in Glasgow. The mortality in every ten thousand of the estimated population of these towns was 34·5 in Paisley, 32·5 in Dundee, 28·0 in Greenock, 27·7 in Glasgow, 27·6 in Perth, 25·1 in Aberdeen, 20·7 in Edinburgh, and 20·2 in Leith.

Diseases of the Organs of Circulation caused 1836 deaths, being 6·21 per cent. of the deaths from all causes, and 15·0 in every ten thousand of their inhabitants. The highest proportion of deaths from this cause is in Perth, and the lowest in Paisley.

Deaths from Diseases of the Organs of Respiration numbered 6393, being 21·63 per cent. of the whole mortality, and 52·3 in every ten thousand inhabitants. The death-rate in a like number of the inhabitants was 62·8 in Glasgow, 59·2 in Greenock, 58·9 in Dundee, 48·9 in Edinburgh, 45·4 in Paisley, 39·0 in Leith, 33·8 in Aberdeen, and 32·2 in Perth. The proportion of deaths from these diseases to the total mortality was 24·65 per cent. in Dundee, 23·73 per cent. in Greenock, 22·23 per cent. in Glasgow, 20·21 per cent. in Edinburgh, 19·22 per cent. in Leith, 18·74 per cent. in Paisley, 18·54 per cent. in Aberdeen, and 16·87 per cent. in Perth.

TABLE XIII.—Monthly Mortality and Mean Temperature in Scotland during 1883, compared with the Mean of the Ten Years 1871-1880.

Months.	YEAR 1883.			1871-1880.	
	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per annum or 1000 per month.	Monthly Proportion of Deaths.	Mean Temperature.

September . .	52°·8	5,061	790	834	53°·6
October . . .	46°·4	5,381	887	885	46°·5
November . .	40°·4	6,016	939	949	40°·2
December . .	39°·4	6,235	973	1,122	37°·0
YEAR . . .	46°·0	76,867	12,000	12,000	46°·3

Bronchitis caused 3740 deaths; Pneumonia, 1896; Pleurisy, 134; Asthma, 71; Laryngitis, 114; and Lung Diseases of Unspecified Nature, 438. Under Diseases of the Organs of Digestion there were registered 1484 deaths, or 5·02 per cent. of the whole mortality, and in the proportion of 12·1 deaths in every ten thousand of their estimated population. Deaths incidental to Teething are not included under this heading. Enteritis caused 380 deaths; Peritonitis 211; and Diseases of the Liver 310.

Diseases of the Urinary Organs caused 574 deaths, being 1·60 per cent. of the total mortality, or 4·7 deaths in every ten thousand of population.

784 deaths were registered as due to Premature Birth; 350 to Teething; and 102 to Malformations, as Cyanosis, Spina Bifida, &c.

Uterine diseases and Ovarian Dropsy are accountable for 60 deaths; Puerperal Fever or Metria for 92; and from other conditions incidental to child-bed 199 deaths have occurred.

916 deaths were attributed to Atrophy and Debility, and 1091 to Old Age.

There were 967 Violent Deaths, being 3·27 per cent. of the gross mortality, and 7·9 in every ten thousand of population. In Greenock the proportion of such deaths in every ten thousand of the inhabitants is 11·2, in Glasgow 9·1, in Leith 8·6, in Dundee and Paisley 7·0, in Edinburgh 6·6, in Perth 6·2, and in Aberdeen 4·6. From the results of Intemperance there were 113 deaths, Delirium Tremens accounting for 13. Suicide ended the lives of 64 persons; and 15 met their end by Murder or Manslaughter.

In these Eight Towns, 88 persons died at the age of 90 or above, 21 being males, and 67 females. One of the former, and one of the latter are said to have been 103 years of age at death.

MARRIAGES IN THE EIGHT TOWNS.

There were 11,246 marriages registered in the above Towns during 1883, and as their estimated population at the middle of the year was 1,233,087, it appears that for every ten thousand inhabitants there were 91 marriages. On comparing Table VIII. with the corresponding one of last year, it is found that while the marriage rate in Edinburgh and Leith remains the same, that in Glasgow, Dundee, Aberdeen, and Paisley has increased, whilst in Greenock it has very slightly diminished.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of 1883 are extracted from the Astronomer-Royal's Notes appended to the Quarterly Reports issued by the Registrar-General.

The chief characteristics of the weather in *January* were, but without any of them having attained a very marked degree, a high mean temperature, a dryness or small humidity in the air, extra depth of rain, extra force of wind, but an extra amount of southerly direction in it. The number of daily deaths averaged 245.

February was warmer than the average by $2^{\circ}5$, and though the rain-fall was rather greater and also the mean pressure of the wind, yet the humidity of the air was less, and the preponderant direction of the winds from south and west, or genial quarter. The average death-rate per diem was 243.

The chief feature of *March* was its extraordinary coldness, and the manner of its interposition, as such, between a warm February and a very warm April. The mean temperature was less than in any of the Registrar-General's registered years. The month was also very dry, or with small humidity, small depth of snow or rainfall, and few days of falling. The wind was at the same time over abundant in force; and as to direction, chiefly characterised by deficiency of west, and excess of north wind. The daily deaths averaged 246.

April 1883 was a fine month of its order, with high barometric pressure, rather greater mean temperature, less humidity, less number of rainy days, less depth of rain-fall, less strength of wind, and rather less both of North and East in the directions of the wind than usual. The average daily death-rate was 237.

The characteristics of *May* were slightly less barometric pressure, mean temperature, humidity, and rain-fall; but more wind, and with a predominant direction from the north-west. The average death-rate per diem amounted to 225.

TABLE XIV.—Meteorology of Scotland for 1883, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1883.

June was on the whole cold and dry, and characterised by an extra amount of east wind. The average number of deaths registered on each day of the month was 210.

July was characterised by a low and much disturbed barometric pressure, with a consequent low mean temperature, large humidity, large rain-fall, and large number of days of falling, but with little strength of wind, and that in the normal direction and distribution for the month. The average daily death-rate was 191.

August differed very little from an average of former years, except in being more windy, that wind chiefly or almost entirely from the west, and the barometric pressure much increased as to range. The daily deaths were 180.

September was generally very near the average of former years, but with a slight inclination to the favourable side, in a small increase of mean temperature with less rain and less wind. The average death-rate per diem was 169.

October was nearly an average month, and in several points though slightly only inclining to the favourable, as higher barometric pressure, higher mean temperature, less humidity, less number of rainy days, less depth of rainfall; the wind rather stronger, but more from the west than usual. The daily death-rate averaged 183.

November was characterised by a low and much disturbed barometric pressure and large amount of both rain, rainy days and strong wind, chiefly from the west. But that, being combined with more southerly than northerly element than usual, the ruling quality of mean temperature was, on the whole rather higher than the average. The daily deaths were 201.

December was generally mild and favourable, with extra-high mean

TABLE XV.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Disease, in Eight of the Principal Towns of Scotland, during each Month of the Year 1883.

1883.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.

temperature ; high though disturbed, barometric pressure, less humidity, less number of rainy days, and less depth of rainfall than usual ; and although the strength of wind was greater, yet the average proportion was from the western as against the eastern, than for many years. The death-rate per diem amounted to 201.

By means of Table XIII. a comparison may be made between the different months of 1883, and the corresponding months of the decennial period 1871-80, with regard to the temperature and the proportion of the annual mortality experienced in each. It appears from the Table that during the year, January, February, November, and December had a mean temperature above that of the average period, whilst the summer months were all below the average in this respect. During January, March, and December, the coldest months, the greatest proportion of deaths was registered, and we should remember that December of the year previous, 1882, was characterised among other things, by its very low temperature. The minimum rate of mortality occurred in September.

In Table XV. the daily deaths in each month in the Eight Towns, Glasgow, Edinburgh, Dundee, Aberdeen, Greenock, Leith, Paisley, and Perth are noted in connection with the principal meteorological phenomena of the year. The average number of daily deaths was most numerous in January, March, and April ; falling gradually until October and November, when there was an increase followed by a decrease again during December.

Six deaths from Small-pox were registered during the year, 1 in the month of April, 2 in November, and 3 in December. Measles gradually increased from 45 deaths in January, to 127 in April, 211 in May, and 173 in June, after which they decreased, rising slightly, however, during November and December.

Deaths from Scarlet Fever were at their maximum in November and December, at a minimum during July.

The largest number of deaths from Diphtheria took place in October, the fewest in April: Croup being most fatal during January, least so during August.

Hooping-cough was again the most fatal of the Miasmatics during the year, the largest number of deaths from it occurring during January, March, and February, after which it gradually fell until October, rising again during the next two months.

Fevers although not causing a large mortality, were most fatal in March, least so in July. The largest number of deaths from Diarrhoea occurred during August and September, the fewest during February.

Consumption proved most fatal during April and June, least so during December. Deaths from Diseases of the Respiratory Organs are most numerous during, or immediately after those months which show the lowest mean temperature, there being 763 during January, 755 during

July	895	255	660	269	2,179	860
August	906	254	647	397	2,204	870
September	885	223	583	318	2,019	797
October	887	242	689	266	2,185	868
November	896	221	804	493	2,424	967
December	844	225	720	484	2,273	898
YEAR	12,496	3,167	9,153	5,577	30,393	12,000

March, 646 during February, and 641 during April; and fewest during August, when there were 290 deaths and in September 313. Much the same thing occurs in the case of the mortality from Cardiac Disease, Brain Disease, and among Old People.

Tables XVII. and XVIII. allow the reader to ascertain the relative monthly mortality experienced among their inhabitants in the before mentioned Eight Towns, divided into four classes according to age. Children under 5 years of age died in largest proportion in January and May, but, during the first six months of the year, the death-rate at these early years was large; the minimum was during December.

Adolescents, those between the ages of five and twenty years, died in the greatest numbers during June and March, and the fewest during December.

The deaths of persons between twenty and sixty years of age were most frequent during January and April, least so during September.

The mortality among the aged, sixty and upwards, was greatest during the first four months, and least frequent during September.

The mortality among all the inhabitants of those towns was heaviest during January. Gradually diminishing in the other months as follows:—April, March, February, May, June, November, December, August, October, July, September.

NINETEENTH ANNUAL REPORT

ON THE

VACCINATION OF CHILDREN

BORN IN SCOTLAND DURING 1882.

From the Vaccination returns for 1882, it is ascertained that of the 126162 children born during that year in Scotland, 110263 were successfully vaccinated, being in the proportion of 87·399 per cent. of the whole. In 1713 cases constituting 1·358 per cent. vaccination was

on medical authority postponed at the time the return was made up; 192 children, 0·152 per cent. were certified to be constitutionally insusceptible of vaccination; 280 children, or 0·222 per cent. were insusceptible from previous successful vaccination; and 4 children were insusceptible from having had Small-pox. 11073, or 8·776 per cent. of the children born, died before vaccination; and 2637 children, or 2·090 per cent. were removed from the districts in which they were born before vaccination, or from some other cause their vaccination was unaccounted for. A noticeable feature is the steadily increasing number of postponements. In 1881 the total number of births was 126277 and the number of postponed cases 1586, while in 1882 the total number of births was 126162, and the number of postponed cases 1713, the number for 1882 being 495 above the average for the previous ten years. (Table XIX.)

In Table XX. the particulars relating to the children who died before vaccination are omitted, and the proportion shown of the children living at the age of six months, who were protected by vaccination. From this Table it appears that of 115089 children who were living at the age of six months, 110263 or 95·807 per cent. were certified to have been successfully vaccinated. In 1713 cases, or 1·488 per cent. vaccination was postponed. 192 children or 0·167 per cent., were constitutionally insusceptible of vaccination, 4, or 0·004 per cent. were insusceptible from having had Small-pox, and 280, or 0·243 per cent. were insusceptible from previous successful vaccination. In 2637 cases, or 2·291 per cent.,

TABLE XXI.—Deaths from Small-pox in Scotland, 1855-1883.

YEARS.	Small-pox Deaths.	YEARS.	Small-pox Deaths.
1855	1,309		
1856	1,306	1870	114
1857	846	1871	1,442
1858	332	1872	2,446
1859	682	1873	1,126
1860	1,495	1874	1,246
1861	766	1875	76
1862	426	1876	39
1863	1,646	1877	38
1864	1,741	1878	4
1865	383	1879	8
1866	200	1880	10
1867	100	1881	19
1868	15	1882	4*
1869	64	1883	12*

* For 1882 and 1883 the Small-pox Deaths are estimated from the ascertained Small-pox Deaths in the Principal Towns, as compared with the Total Small-pox Deaths in all Scotland during the Twenty Years 1855-1874.

TABLE XXII.—Small-pox Deaths in Eight of the Principal Towns of Scotland at different Ages in 1883, also during the Ten Years 1865-1874, compared with those of the Ten Years 1855-1864, in the same Towns before the Vaccination Act came into operation.

AGES.	SMALL-POX DEATHS, 1883.		SMALL-POX DEATHS, 1865-1874.		SMALL-POX DEATHS, 1855-1864.	
	Number.	Percentage at each age.	Number.	Percentage at each age.	Number.	Percentage at each age.
0-5	1	16·67	1039	28·41	4062	75·03
5-20	1	16·67	1059	28·96	660	12·19
20-60	4	66·66	1519	41·54	687	12·67
60 and above	0	0·00	40	1·09	6	0·11
Total	6	100·00	3657	100·00	5415	100·00

certificates of successful vaccination had not been returned to the Registrars.

Table XXI. gives the number of deaths from Small-pox for each year from 1855 to 1883, the numbers for the last two years being estimated. In 1883, Small-pox caused 6 deaths in Eight of the Principal Towns, and in the Selected Districts, of which a Summary is given in the Monthly Reports, 1 death resulted from the same cause.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

STATISTICAL DEPARTMENT,
13th March 1884.

33. WIGTOWN.

APPENDIX.

VACCINATIONS, 1882.

EXTRACTS FROM THE REGISTRARS' NOTES RELATIVE TO THE WORKING OF THE VACCINATION ACT.

I. NORTHERN DIVISION.

1. SHETLAND.

1. (2) BURRA AND QUARFF.—Three cases still outstanding, in one of which the father says that his child is unfit to be carried out, and that it is very expensive to have a special visit of the Doctor, who refused to see it when in the district at the Annual Vaccination.

4. (2) NORTH YELL.—The working of the Act as practised in this district is a comparative failure. The postponements are out of all proportion to the Vaccinations, and in this respect there is no evidence of improvement. The time allowed here is twelve months, and few of the people think of conforming to the Act until that period is almost or quite expired, the usual result being a postponement for four or six months on account of teething, &c. The Parochial Inspector is not aware of any minuted arrangement with the Board of Supervision; and the Vaccinators (of whom there are two) have seemingly nothing to go by. A six months limit would compel the parents to vaccinate before teething began, and might do much to reduce the great number of postponements.

12. (3) PAPA STOUR.—No Vaccinator has visited this district during the year, which accounts for the children not being vaccinated.

2. ORKNEY.

26. SANDAY.—Act well attended to, both by Vaccinator and parents or guardians; very few postponements.

3. CAITHNESS.

36. DUNNET.—Difficulties have been experienced in getting certificates, owing to the death of one Doctor, and the indisposition of the Medical Officer of the parish.

4. SUTHERLAND.

45. CLYNE.—People belonging to the parish are all willing to comply with the Act, but strangers try all excuses to avoid it.

48. DURNESS.—The three cases in column 7 are of children of travelling tinsmiths, popularly tinkers, two of which are twins. The postponed entry is also of one of twins, children of a shepherd in an inconvenient locality. The Medical Officer is very attentive to his duties.

53. LAIRG.—Vaccination well attended to, often, owing to distance, under considerable difficulty.

II. NORTH-WESTERN DIVISION.

5. BOSS AND CROMARTY.

Mainland.

66. (2) SOUTHERN DISTRICT OF GAIRLOCH.—Vaccination hindered by Hooping-Cough and Measles, both of which were prevalent during the year.

75. (1) LOCHBROOM.—Hooping-Cough, which was prevalent throughout the parish, and fatal in several cases, alarmed the parents and prevented the due attention to Vaccination, which was so universal before. It is to be hoped that no farther hindrance will be given to the operation.

Insular.

87. LOCHS.—The large number of children unvaccinated is accounted for by the prevalence of Scarletina during the last six months of 1883. The Medical Officer does not think it safe to vaccinate during the cold season.

6. INVERNESS.

Mainland.

90a. ABERNETHY AND KINCARDINE.—Many parents are very careless as to having their children vaccinated within the specified time, and the threatening notice seems frequently to be looked for as a matter of course. The idea is becoming prevalent that Vaccination, owing to the use of impure matter, is liable to transmit disease, but the Registrar cannot report any deliberate attempt to evade the law.

97. (1) GLENELG.—Act continues to work satisfactorily.

97. (2) KNOYDART.—Of the eight children born in 1882, five are still unvaccinated. The Inspector of Poor and Parochial Doctor both live at the extreme north end of the parish, 17 miles distant from the Registrar. About mid-way, Loch Hourm, an arm of the Sound of Slate, has to be crossed; and it often happens when a day is fixed for Vaccination that the Doctor cannot come on, in consequence of stormy

weather. Saturday, February 9, has been fixed for Vaccination here. Notice is duly sent to all defaulters, also a Return to the Inspector of Poor in September and March. The parish is very difficult to work, there being no roads; most of the journeys are with small boats, and in consequence frequent changes take place amongst the Medical Officers, 14 having been in the district during the last 18 years.

99. (2) LOCHABER.—Measles prevalent last summer, interfering greatly with the successful working of the Act.

102. KINGUSSIE AND INSH.—The Vaccinator explains that, owing to the wetness and coldness of the year, many children remain unvaccinated. A great many were affected with Bronchitis and other complaints. In 1882 Hooping-Cough prevailed, and parents objected to their children being vaccinated unless they were in perfect health.

Insular.

108. BARRA.—Most of those entered in column 7 are vaccinated, but the Vaccinator states that, owing to the stormy weather, he was unable to see whether the operation was successful or not.

111. (2) SOUTH HARRIS.—Vaccinator prevented from carrying out the law in consequence of the prevalence of Fever.

112. (2) STENSCHOLL.—Vaccination of the children entered in column 2 was postponed on account of illness. The Vaccinator has done his utmost to have the provisions of the Act carried out, but owing to the bad weather, and illness of the children, this was impossible.

III. NORTH-EASTERN DIVISION.

7. NAIRN.

120. ARDCLACH.—Requirements of the Act very carefully attended to, and the people appreciate the provisions thereof. The Vaccinator, who is paid by the Parochial Board, is exceedingly attentive to his duties, and the operations are very successful. The Registrar is not aware of a single instance, since the passing of the Act, in which it was necessary to report to the Inspector of Poor, nor does he know of a solitary example in which serious results followed as a consequence of Vaccination.

10. ABERDEEN.

226. NEWHILLS.—The Registrar finds great difficulty in getting parents to have their children vaccinated in due time. There are a few prejudiced against the operation, and more who simply require to be pressed until the operation is performed.

238. SKENE.—Parents very punctual in having their children vaccinated, and no notices are required. As a rule, there are no postponements.

IV. EAST-MIDLAND DIVISION.

12. FORFAR.

282. (4) ST ANDREWS (DUNDEE).—One or two Medical men in this district continue to cause much annoyance and trouble to parents, as well as to the Registrar, by advising the parents to delay until they receive the Statutory Notice. The Registrar is almost tempted to name these. By abolishing the ten days' grace, and shorten-

ing the period within which Vaccination must be effected, a great improvement would be wrought.

282. (5) LOCHER (DUNDEE).—Of the 14 entered under column "Removed from District," seven are illegitimate children, whose mothers have gone and left no address.

14. FIFE.

442. KIRKCALDY AND ABBOTSHALL.—There is still much delay in getting in the certificates, but upon the whole the Act works well. The certificates in most of the cases marked unaccounted for, will be procured, though not without a great deal of trouble.

452. PITTENWEEM.—The only difficulty is with cases of postponement.

V. WEST-MIDLAND DIVISION.

19. ARGYLL.

Mainland.

505. (3) STRONTIAN.—The prevalence of an epidemic of Measles during April and May contributed to the delay in the Vaccination of several children.

511. GLASSARY.—The two cases of Insusceptibility of Vaccination "on the ground of previous successful Vaccination," were in consequence of the death of the Doctor who had vaccinated the children, but had not forwarded the certificate to the Registrar.

515. KILBRANDON AND KILCHATTAN.—The prevalence of Measles has delayed the progress of Vaccination.

529. MUCKAIRN.—The Registrar has very much trouble in connection with Vaccination, scarcely any one attending to the matter in time. A few have been vaccinated for whom certificates have not yet been received; and several have left the district, but steps are being taken to trace them.

VI. SOUTH-WESTERN DIVISION.

21. RENFREW.

567. GOUROCK.—Of the nine returned as having left the district, seven were born in Greenock Poorhouse, Gourrock.

22. Ayr.

597. KILMARNOCK.—A few grumble a little about the results of the Vaccination, and say that the Deaths of their children resulted from bad matter. No one, however, has refused to take the Schedule or get the Vaccination performed. Of the eight entered in column 7, one half have left the country.

610. OLD CUMNOCK.—One case of refusal to vaccinate has been reported to the Parochial Board, along with a few cases of neglect.

VII. SOUTH-EASTERN DIVISION.

26. HADDINGTON.

705. DIRLETON.—The two cases entered under column "Removed from District," were children of tramps, without domicile, who, although furnished with certificates in envelopes addressed to the Registrar, have not yet forwarded them.

29. SELKIRK.

7766. LADHOPE.—One of the cases entered in column 7 was caused by the refusal of the parent to comply with the Act, for which he has been fined. The Registrar thinks that the large number unaccounted for is in consequence of emigration from the district.

VIII. SOUTHERN DIVISION.

30. ROXBURGH.

793. KELSO.—It still occasionally happens

that certificates of successful Vaccination do not reach the hands of the Registrar within the time allowed by the Act, thereby causing unnecessary trouble to those concerned.

33. WIGTOWN.

593. NEW LUCK.—The Act is working well but the Registrar has still a deal of unnecessary trouble in sending notices for Vaccination and getting certificates. After the Vaccination has been performed, the parents consider the whole of their duty to be done, and leave it to the Registrar to search for the certificates.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES
BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
14	Deerness	Part of St Andrews.
15	Eday and Pharay	Part of Stronsay and Eday.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
58	Applecross	(1) Part of Applecross; (2) Rest of Applecross and part of Gairloch.
596	Carnoch	Parts of Contin, Fodderty, and Urray.
716	Kinlochluichart	Parts of Contin, Fodderty, and Urray.
866	Carloway	Parts of Lochs and Uig.
87	Lochs	Parts of Lochs and Uig.
112	Kilmuir	(1) Part of Kilmuir; (2) Rest of Kilmuir and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie and St Andrews-Lhanbryde.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrines	Parts of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
210b	Kinninmonth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick, Tullich, and Glengairn.
222b	Millbren	Parts of Fyvie and Monquhitter.
227b	New Pitallgo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarnes.
240	Strathdon	Strathdon, and part of Tarland.
249b	Ythan Wells	Parts of Auchterless and Forgus.

Abernethy and Kincardine, 90	Ayr, . . . 578	Bonar, . . . 48	Carnbee, . . . 413	Crawford, . . . 635
Abernyte, . . . 327	Ayton, . . . 727	Bonhill, . . . 493	Carnoch (Ross), 595	Crawfordjohn, 636
Aboyne, . . . 170	Baldernock, 471	Borgue, . . . 858	Carnock (Fife), 414	Creich (Fife), 418
Aharacle, . . . 505	Balfon, . . . 472	Bo'ness, . . . 663	Carnwath, . . . 632	Crichton, 681
Airdrie, . . . 651	Ballachulish and Corran of Ard- gour, . . . 506	Borthwick, . . . 674	Carriden, . . . 664	Criech (Suther- land), . . . 46
Airth, . . . 469	Ballantrae, 579	Bothkennar, 473	Carrington, 675	Crieff, . . . 342
Alford, . . . 171	Ballingry, . . . 408	Bothwell, . . . 625	Carsphairn, 860	Crimond, . . . 184
Alloa, . . . 465	Balmacellan, 856	Botriphnie, 143	Castleton, . . . 784	Cromarty, . . . 61
Alness, . . . 57	Balmaghie, 857	Bourtie, . . . 176	Cavers, . . . 785	Cromdale and Advie, . . . 128
Alva (Stirling), 470	Balmerino, . . . 409	Bowden, . . . 783	Cawdor, . . . 122	Crosshill, . . . 584
Alvah (Banff), 146	Balquhider, 331	Boyndie, . . . 149	Ceres, . . . 415	Crossmichael, 863
Alves, . . . 125	Banchory-Deve- nick, . . . 251	Bracadale, . . . 109	Channelkirk, 729	Croy & Dalcross, 94
Alvie, . . . 90	Banchory-Ter- nan, . . . 252	Brechin, . . . 275	Chapel-of-Gar- loch, . . . 179	Cruden, . . . 185
Alyth, . . . 328	Banff, . . . 147	Bressay, . . . 1	Chirnside, . . . 730	Cullen, . . . 150
Anarum, . . . 780	Bannockburn, 488	Bridgeton, . . . 644	Clackmannan, 466	Culross, . . . 343
Anderston, . . . 644	Bargrennan, 857	Brodick, . . . 553	Clatt, . . . 180	Culsamond, 186
Annan, . . . 812	Barony, . . . 622	Broughton, 758	Cleish, . . . 460	Culter, . . . 637
Anstruther-E., 402	Barr, . . . 580	Brydekirk, . . . 813	Closeburn, . . . 816	Cults, . . . 419
Anstruther-W., 408	Barra (Inver- ness), . . . 108	Buchanan, . . . 474	Clunie (Perth), 339	Cumbernauld, 495
Anwoth, . . . 355	Barrahead and Levern, . . . 572	Buittle, . . . 59	Cluny (Aber'dn), 181	Cumbræ, . . . 552
Appin, . . . 525	Barrhill, . . . 582	Bunkle and Preston, . . . 728	Clyne, . . . 45	Cumlodden and Minard, . . . 509
Applecross, 58	Barry (Forfar), 274	Burntisland, 411	Cockburnspath, 731	Cummertrees, 817
Applegarth, 813	Barvas, . . . 86	Burra & Quarff, 1	Cockpen, . . . 676	Cupar, . . . 420
Arbriot, . . . 271	Bathgate, . . . 662	Cabrach, . . . 177	Coigach, . . . 75	Currie, . . . 682
Arbroath, . . . 272	Beath (Fife), 410	Cadder, . . . 626	Coldingham, 732	Dailly, . . . 585
Arbuthnott, 250	Bedrule, . . . 782	Caddoufoot, 774	Coldstream, 733	Dairsie, . . . 421
Archattan, 504	Beith (Ayr), 581	Cairney, . . . 178	Colinton, . . . 677	Dalavich, . . . 517
Ardclach, . . . 120	Belhelvie, . . . 174	Calderhead, 626	Coll, . . . 551	Dalbeattie, . . . 864
Ardersier, . . . 91	Bellie, . . . 126	Callander, . . . 336	Collace, . . . 340	Dalgetty, . . . 422
Ardnamurchan, 505	Bennie, . . . 118	Calton, . . . 644	Collessie, . . . 416	Dalkeith, . . . 683
Ardoch, . . . 328	Benbecula, . . . 118	Cambuslang, 627	Colmonell, . . . 582	Dallas, . . . 129
Ardrossan, . . . 576	Bendochy, . . . 332	Cambusnethan, 628	Colonsay, . . . 539	Dalmellington, 586
Arisaig, . . . 505	Benholm, . . . 253	Cameron, . . . 412	Colvend, . . . 861	Dalmeny, . . . 665
Armadaie, . . . 662	Bernera, . . . 111	Camlachie, 644	Comrie, . . . 341	Dalry (Ayr), 587
Arngask, . . . 404			Contin, . . . 60	
Arrochar, . . . 492			Cookney, . . . 258	
			Corsock-Bridge, 862	

* The actual number of Districts is 1038—many Parishes and Burghs having been divided into two or more Districts for the purposes of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 5 and 14 Districts respectively. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

Dalry (Kirkcud bright), . . .	865	Ecclesmachan, . . .	666	Gartly, . . .	198	Innerleithen, . . .	762	Kilmore & Kil-
